2007 Distribution of Taconite Production Tax

2006 Production Year

Total Taconite Production Tax
\$93,096,939*

Production tax is \$2.203 per taxable ton.
 The three-year average taxable tonnage was 39,297,977 tons.

* Amount is after \$2,122,059 in tax credits have been applied. Also included is \$8,645,555 from the state general fund (22.0 cpt)

cpt = cents per taxable ton

Introduction

The *Minnesota Mining Tax Guide* is published to identify all Minnesota mining-related taxes paid by the mining industry. This book strives to simplify the complicated tax statutes using language that is easy to understand and non-technical narratives, tables, graphs and flowcharts.

Taconite Production Tax

The taconite production tax is the largest tax paid by the iron mining industry. It is a major source of revenue to the counties, municipalities and school districts within the taconite assistance area.

The production tax distributed in 2007 is the tax due for the 2006 production year. The taconite production tax rate for concentrates and pellets produced in 2006 was \$2.203 per taxable ton. The taxable tonnage for 2006 is the average tonnage produced in 2004, 2005 and 2006.

The inside of the front cover illustrates where the production tax is distributed. It shows both the cents per ton (cpt) distribution and the total amount distributed to various funds. The funds to which the production tax are distributed are explained on pages 7 through 11, *Distribution of Funds*.

State Taxes

Other major taxes paid by the mining industry are the occupation tax, similar to an income tax, pages 28 - 36, and sales and use tax, pages 40 - 42. These taxes are deposited in the State General Fund.

County Taxes

Other taconite and iron ore ad valorem (property) taxes are paid directly to the counties, pages 44 - 50. These are property taxes assessed on taconite railroads, unmined taconite ore, auxiliary mining lands, unmined natural ore and severed mineral interests.

Taxes on Other Minerals

Taxes on minerals other than taconite or iron, such as gold, silver, copper, nickel, lead and other nonferrous minerals are explained on pages 51 - 53.

Aggregate Material Sales/Use Tax

An explanation of sales and use tax on aggregate material is found on page 43.

Figure 1

Iron Ore Production Comparison

Figure 2

* Includes \$8,645,555 appropriation from the State of Minnesota general fund, less tax credits of \$2,122,059.

Taxes often levied (assessed) for one year and paid in the following year

1. Total use tax less total refunds paid after 1990, see *Figure 34*.
2. Amount Paid (unaudited). Does not include adjustments.
3. Repealed effective after December 31, 1989.
4. Repealed effective after December 31, 1988. Beginning with payable 1990, taconite railroads were taxed on an ad valorem basis.
5. Tons are without flux additive beginning in 1987. Beginning in 1990, production tons are reported dry.

* Full amount of tax levied. Does not include bankruptcy adjustments or state appropriations.

Taconite Production Tax

(Minnesota Statutes 298.24 and 298.28)

General Information

Definition

The taconite production tax is a severance tax paid on concentrates or pellets produced by the taconite companies. It is paid in lieu of ad valorem (property) taxes on taconite and lands containing taconite. Land and structures used in the production of taconite are also excluded from property tax, with some exceptions (see pages 44 and 45). Electric power plants principally devoted to the generation of power for taconite mining and concentrating are considered to be used in the production of taconite (or direct reduced ore) and are covered by the *in lieu exemption* for property taxes. If part of the power is used for other purposes, that proportion of the power plant is subject to the general property tax. The power plant must be owned by a company subject to production tax to qualify for the exemptions.

Tax Rate

The taconite production tax rate for any given year is determined by multiplying the prior year's rate by the percentage change in the Gross Domestic Product Implicit Price Deflator (GDPIPD) from the fourth quarter of the second preceding year to the fourth quarter of the preceding year. The U.S. Department of Commerce publishes the GDPIPD monthly in Survey of Current Business. This escalator takes effect each year unless the rate is frozen or changed by the Minnesota State Legislature. The tax rate for the 2006 production year was \$2.203 per taxable ton. For concentrates produced in 2007, the rate will be \$2.258 per taxable ton.

Taxable Tons

The production tax is levied on taxable tons, which are the average tons produced during the current year and the previous two production years. This eliminates the peaks and valleys of tax payments by the taconite producers and distribution to the tax recipients. The result is a more stable tax base resembling a property tax.

Distribution

Under Minnesota law, production tax revenues are distributed to various cities, townships, counties and school districts within the Taconite Assistance Area. This is an area comprising the present taconite mining areas plus areas where natural ore was formerly mined.

Funds are also allocated to the Iron Range Resources (IRR), which administers the Taconite Environmental Protection Fund, the Douglas J. Johnson Economic Protection Trust Fund, the Taconite Economic Development Fund (sometimes referred to

as the Investment Tax Credit), the Taconite Assistance Program and other loan and grant programs for both the range cities and townships and the taconite industry. More information about the IRR can be found on pages 24 - 27.

Payment Dates and Method

For taxes payable in 2004 and thereafter, the payments are due 50 percent on February 24 and 50 percent on August 24. If the 24th falls on a weekend or holiday, the payment date is the next regular work day. The Department of Revenue must notify each taconite producer of its tax obligation for the year by February 15.

Each taconite producer must make payments to six counties and the IRR on or before the due date. Payments are made to Aitkin, Cook, Crow Wing, Itasca, Lake and St. Louis Counties, and to the IRR. The county auditors then make payments to cities, townships and school districts.

Producer Grant and Loan Fund (M.S. 298.2961)

The producer grant program was renewed by the 2005 legislature. The amount allocated is 5 cents per ton (cpt) plus the revenue generated by the tax rate increase for the 2004 production year. The 2005 distribution was entirely allocated to the City of Virginia for the steam heating system. The 2006 distribution was allocated to the cities of Hibbing and Virginia public utilities for biomass conversion. The 2007 distribution is allocated to the City of Tower for the East Two Rivers project. For distributions in 2008, the first \$2,000,000 will be allocated to St. Louis County for the relocation of St. Louis County Road 715. The remainder of the 2008 distributions and the full amounts in 2009 and later, will be allocated to joint ventures with mining companies for reclamation of lands containing abandoned or worked out mines.

Taconite Economic Development Fund (M.S. 298.227)

The Taconite Economic Development Fund (TEDF) was first created for production years 1992 and 1993 at a rate of 10.4 cents per taxable ton.

No distribution is made under the TEDF or the Producer Grant Program in any year in which total industry production falls below 30 million tons. Any portion of the TEDF fund not released within two years of deposit is divided, with two-thirds to the Environmental Protection Fund and one-third to the Douglas J. Johnson Economic Protection Trust Fund. To date, all funds have been approved and released to the taconite producers before the two-year deadline expiration. The 2001 legislature made the TEDF permanent at 30.1 cpt for distributions in 2002 and thereafter. The first 15.4 cents (of the 30.1 cents) does not require a matching investment by the company. A matching expenditure of at least 50 percent is required to qualify for the additional 14.7 cents per ton (above 15.4 cents).

The legislature added the following requirement: “If a producer uses money from the fund to procure haulage trucks, mobile equipment, or mining shovels, and the producer removes the piece of equipment from the taconite tax relief area defined in section 273.134 within ten years from the date of receipt of the money from the fund, a portion of the money granted from the fund must be repaid to the taconite economic development fund. The portion of the money to be repaid is 100 percent of the grant if the equipment is removed from the taconite tax relief area within 12 months after receipt of the money from the fund, declining by ten percent for each of the subsequent nine years during which the equipment remains within the taconite tax relief area.”

Each producer has two potential sources of TEDF money:

1. **Acid or flux pellets** — The production tax amount credited to each producer’s share of the Taconite Economic Development Fund is 30.1 cpt.
2. **Pellet chips and fines** — This remains the same as last year—an amount equal to 50 percent of the tax for pellet chips and fines sold not exceeding 5/16-inch, is allocated to each company’s share of the Taconite Economic Development Fund. The total amount may not exceed \$700,000 for all companies. If the total claimed exceeds \$700,000, each company’s share will be prorated. The determination of this allocation is based on current production year **sales** of chips, fines and concentrate—not the three-year average of production. Sales of crushed pellets *do not* qualify for this credit. [M.S. 298.28, subd. 9a(b).]

Therefore, each company is eligible to receive 30.1 cents per taxable ton plus an additional amount based on current year tons of chips and fines sold. A list of TEDF-funded projects and yearly distributions is shown in *Figure 21*.

Flux Pellets

Flux pellets have limestone or other basic flux additives combined with the iron concentrates before pelletizing. Three companies, Minorca, Northshore and USX, produce fluxed pellets, although all have experimented with them. United Taconite, Hibbing Taconite, Keewatin Taconite and Northshore are producing a partially fluxed pellet containing a low percentage of limestone additives.

M.S. 298.24, subd. 1 (f) allows the weight of flux added to be subtracted from the pellet weight for production tax purposes. All tables in the *Minnesota Mining Tax Guide* with production statistics use an equivalent or calculated weight for fluxed pellets. The taxable weight is the dry weight less the weight of the flux. The weight of the flux is determined by a metallurgical calculation based on the analyses of the finished pellet, the concentrate and the flux stone. Beginning in 1988 (1987 production year), a flux credit was allowed against production tax.

Occupation tax is based on iron units and uses the full weight including flux. A reconciliation of both tonnages and the flux weight is shown on *Figure 26*.

Pellet Weighing

Pellet tonnages are reported on a dry weight basis. This began with the 1990 production year.

Definition of Taconite Tax Relief Area

One common prerequisite exists for all taconite aids and grants; the recipient must be within the geographic confines of the Taconite Tax Relief Area or the Taconite Assistance Area. This is defined by state laws (M.S. 273.134 and M.S. 273.1341) as follows:

“*Tax relief area*” means the geographic area contained within the boundaries of a school district that meets the following qualifications:

- (1) *It is a school district in which the assessed valuation of unmined iron ore on May 1, 1941, was not less than 40 percent of the assessed valuation of all real property and whose boundaries are within 20 miles of a taconite mine or plant; or*
- (2) *It is a school district in which, on Jan. 1, 1977, or the applicable assessment date, there is a taconite concentrating plant or where taconite is mined or quarried or where there is located an electric generating plant which qualifies as a taconite facility.*

Definition of Taconite Assistance Area

A “taconite assistance area” means the geographic area that falls within the boundaries of a school district that contains a municipality in which the assessed valuation of unmined iron ore on May 1, 1941, was not less than 40 percent of the assessed valuation of all real property. Any area within the Taconite Tax Relief Area is also considered to be within the Taconite Assistance Area.

State Contribution (298.285 State Aid Amount; Appropriation)

The commissioner of revenue shall determine a state aid amount equal to a tax of 33 cents per taxable ton of iron ore concentrates for production year 2001 and 22 cents per taxable ton of iron ore concentrates for production years 2002 and thereafter. There is appropriated from the general fund to the commissioner an amount equal to the state aid determined under this section. It must be distributed under M.S. 298.28, as if the aid were production tax revenues.

2007 Legislation

Production Tax

No changes to production taxes were passed during the 2007 legislative session. Thus, the tax rate for concentrates produced in 2007 was allowed to increase from \$2.203 to \$2.258 per taxable ton.

Distribution of Funds (Minnesota Statute 298.28)

Subd. 2 - Taconite Cities and Towns Fund

(a) The Taconite Cities and Towns Fund allocates 4.5 cents per ton to cities and towns where taconite mining and concentrating occur. Forty percent (1.8 cpt) goes to cities and townships in which mining activity occurs. The remaining 60 percent (2.7 cpt) goes to cities and townships in which concentrating taconite occurs. *Note: This is done on a company-by-company basis.*

If both mining and concentrating take place in a single taxing district, the entire 4.5 cents is allocated there. If mining occurs in more than one city or town, the revenue (1.8 cpt) is divided based on either a percentage of taconite reserves or a four-year production average. Most taconite mines have mining in two or more areas.

If concentrating is split between two or more cities or towns, the revenue (2.7 cpt) is divided by the percentage of hours worked in each. The primary crusher is considered the first stage of concentration. The only current examples are Northshore (Babbitt, Beaver Bay Township and Silver Bay), former LTV (Hoyt Lakes and Schroeder Township-LTV powerplant), EVTAC and United Taconite (Eveleth, Fayal Township, and McDavitt Township). Beaver Bay Township qualifies due to the location of the tailing basin that is part of the concentrating process. Distribution detail is shown in *Figure 10*.

(b) Mining Effects — Four cents per taxable ton is allocated to cities and organized townships affected by mining because their boundaries are within three miles of a taconite mine pit that was actively mined in at least one of the prior three years. If a city or town is located near more than one mine meeting the criteria, it is eligible to receive aid calculated from only the mine producing the largest taxable tonnage. When more than one municipality qualifies for aid based on one company's production, the aid must be apportioned among the municipalities in proportion to their populations. One-half of the money must be used for infrastructure improvement projects and one-half for projects in which two or more municipalities cooperate.

The IRR has provided some guidelines for appropriate use of these funds:

1. One half for infrastructure improvement projects:

- Public buildings - construction or major maintenance; does not include normal cleaning and maintenance or janitorial services
- Water and sewer systems
- Streets, sidewalks, roads and bridges
- Parks and recreational facilities
- Public trails
- Does not include mobile equipment

2. One-half for cooperative projects between two or more communities:

- Parks and recreational facilities
- Public trails or other community facilities
- Public services such as recreational activities, law enforcement and fire protection
- Other joint ventures

Use of mining effects fund is not limited to the above examples. Cooperative projects are not limited to communities that receive a mining effects distribution. For example, community A, which receives mining effects aid, can undertake a project with community B, which does not.

A community should report to the IRR by January 15 of the year following the receipt of the mining effects aid. Reports should be submitted to Richard Walsh, Grants Administrator, IRR, 4261 Hwy 53 South, P.O. Box 441, Eveleth, MN 55734.

Subd. 3 - Taconite Municipal Aid Account

(a) The Taconite Municipal Aid is funded at 12.5 cents per taxable ton. The Kinney-White allocation (par. b) and the .3 cent Range Association of Municipalities and Schools (RAMS) allocation in subd. 8 are subtracted from it. The payment is made on September 15. Each city or township first receives the amount it was entitled to receive in 1975 from the occupation tax. The amount is then reduced according to the percentage aid guarantee provisions in M.S. 298.225. For example, if production levels mandate a 90 percent aid guarantee, then the occupation tax grandfather amount is also reduced to 90 percent. The remainder of the aid is distributed according to a complex formula using levies, valuation, population and fiscal need factors.

The first step in this formula is to determine the *fiscal need factor* (FNF). The FNF is a three-year average of the sum of the local government aid (LGA), local levy and production tax revenues received by the community. Next, the local effort tax capacity rate equals the fiscal need factor per capita (FNFPC) divided by 17. If the FNFPC is greater than 350, the local effort tax capacity rate (LET CR) is 350 divided by 17 plus the excess over 350 divided by 15. The minimum allowable LET CR is 8.16. The final step in this formula is to compute the *distribution index* (DI). The distribution index for a community equals its FNF minus LET CR times the adjusted net tax capacity divided by 100.

$$\text{If FNFPC} \leq 350, \text{LET CR} = \frac{\text{FNFPC}}{17}$$

$$\text{If FNFPC} > 350, \text{LET CR}^* = \frac{350 + (\text{FNFPC} - 350)}{17 + 15}$$

$$\text{DI} = \frac{*(\text{FNF minus LET CR}) \times \text{Adjusted Net Tax capacity}}{100}$$

* Minimum allowable LET CR = 8.16

A distribution index is determined for all eligible communities. A percentage is determined by comparing the distribution index of a particular community to the total of distribution indexes for all eligible communities. This percentage is then multiplied by the amount of available municipal aid to determine an amount for each community. Prior to this calculation, the occupation tax grandfather amounts and special aid for the city of Kinney and township of White are subtracted from the total available to the municipal aid fund.

The conditions necessary for a municipality to qualify for this aid are identical to the qualifications for the 66 percent taconite property tax relief listed under subd. 6 (see page 9). The state laws governing Municipal Aid are M.S. 273.134, 298.28, Subd. 1, Clause 2, and 298.282. Distribution detail is *Figure 10*.

(b) and (c) - Additional money is allocated to cities and townships if more than 75 percent of the city's assessed valuation consisted of iron ore as of Jan. 2, 1980, or if more than 75 percent of the township's assessed valuation consisted of iron ore on Jan. 2, 1982. The distribution is calculated using certified levies, net tax capacities and population. Currently, only White Township and the city of Kinney qualify.

Special Municipal Aid (M.S. 126C.48, Subd. 8)

Legislation passed in 2002 authorizes some cities and townships to receive aid from money allocated to their school districts for levy reduction to the extent that the levy reductions exceed the school's levy limitations.

Subd. 4 - School Districts

(a) Seventeen and fifteen-hundredths (17.15) cents per taxable ton was distributed in 2007 under (b) and (c) plus the amount in paragraph (d).

(b) Taconite School Fund (3.43 cents)

A total of 3.43 cents per taxable ton for each taconite company is allocated to school districts in which mining and concentrating occurs. If the mining and concentrating take place in separate districts, 40 percent is allocated to the location of mining and 60 percent to concentrating. In addition, if the mining occurs in more than one school district, the 40 percent portion is further split based on either a four-year average of production or a percentage of taconite reserves. If the concentrating function of a company takes place in more than one school district, the 60 percent portion is further split according to hours worked in each district. The primary crusher, tailings basin and power plant owned by a taconite company are considered part of concentrating. When these are in different school districts from the plant, the hours-worked split is used. Distribution details in *Figure 11*.

(c) Regular School Fund (13.72 cents)

A total of 13.72 cents per taxable ton is split among the 15 school districts in the Taconite Relief Area. Each school district receives the amount it was entitled to receive in 1975 from

the taconite occupation tax (under M.S. 298.32). This amount may be increased or reduced by the percentage aid guarantee provisions of M.S. 298.225. The remaining amount in the fund is distributed using an index based on pupil units and tax capacities. Generally, districts with larger tax capacities per pupil unit tend to receive a proportionately smaller amount of this fund. Distribution detail is in *Figure 11*.

The index is calculated as follows: The pupil units for the prior school year are multiplied by the ratio of the average net tax capacity per pupil unit of all taconite districts to the adjusted net tax capacity per pupil unit of the district. Each district receives the portion of the distribution that its index bears to the sum of the indexes for all taconite school districts.

(d) Taconite Referendum Fund (21.3 cents)

The Taconite Referendum Fund (TRF) receives an allocation of 21.3 cents per taxable ton. Taconite school districts qualify for an additional \$175 per pupil unit over and above state aids by passing a special levy referendum equal to 1.8 percent of net tax capacity. The pupil units used in the computation are the greater of the previous year or the 1983-84 school year units. On July 15, the TRF pays the difference between the local levy and \$175 per pupil unit. If any money remains in the fund, it is distributed to the Environmental Protection Fund (two-thirds) and the Northeast Minnesota Economic Protection Trust (one-third). *Note: A district receiving money from the TRF must reserve the lesser of \$25 or the amount received per pupil unit (of the \$175 authorized) for early childhood programs or outcome-based learning programs. The commissioner of the Minnesota Department of Education must approve the outcome-based programs.* Distribution detail is in *Figure 11*.

(e) Each school district is entitled to receive the amount it received in 1975 under 298.32 (Occupation Tax Grandfather).

Subd. 5 - Counties

(a) The allocation of 26.05 cents per taxable ton to taconite counties (subject to adjustment by M.S. 298.225) is to be distributed under subd. 5(b) through (d). The amounts listed in (b) and (d) are the statutory amounts prior to any adjustment by M.S. 298.225. Distribution detail is in *Figure 13*.

(b) Taconite Counties with Mining or Concentrating

An amount of 20.525 cents per taxable ton is distributed to the county in which the taconite is mined or quarried or in which the concentrate is produced (split in the same manner as taconite cities and towns), less any amount distributed in subd. 5(c). Distribution detail is in *Figure 13*.

(c) Counties - Electric Power Plant

If an electric power plant owned by and providing the primary source of power for a taconite plant is located in a county other than the county in which the mining and concentrating processes are conducted, one cent of the 13 cents per ton (for that company) is distributed to the county

in which the power plant is located. *This one cent is not escalated but is subject to M.S. 298.225 adjustment with variable guarantee.* Cook County continues to receive aid based on the former LTV power plant due to the guarantee provided by M.S. 298.225. For the 2006 production year, this amounted to \$90,757. The only company whose distribution is affected is the former LTV Steel, due to its power plant location at Taconite Harbor in Cook County. Its one cent per ton distribution for the 1983 base year was figured on 9,793,639 tons. This amount was carried forward from 1979 based on a previous guarantee. The current year M.S. 298.225 guarantee percentage is always applied.

$$\text{\$97,936 (1983 base)} \times \text{92.669436\%} = \text{\$90,757}$$

There is also a transfer of \$20,877 ($\{1983 \text{ base of } \$22,528\} \times 92.669436\%$) to the county fund covered in Subd. 6(b). Therefore, Cook County receives a total of \$111,634 ($\$90,757 + \$20,877$) due to the LTV power plant.

(d) Taconite County Road and Bridge

Each county receives a portion of the aid that is deposited in the County Road and Bridge Fund in the same manner as taconite cities and towns. The basic allocation is 5.525 cents per taxable ton subject to adjustment as in M.S. 298.225. Distribution detail is in *Figure 13*.

Subd. 6 - Taconite Property Tax Relief

(a) Taconite Property Tax Relief

The amount sent to this fund was set by the 2001 legislature at 33.9 cents per taxable ton for the 2002 production year. For the production year 2002 and subsequent years, the fund is subject to indexing by using the gross domestic product implicit price deflator. The indexed amount was 38.49 cents per ton for the 2006 production year. The qualifications and distribution of taconite property tax relief are described in the following paragraphs.

The *Taconite Homestead Credit* reduces the tax paid by owners of certain properties located on the Mesabi and Vermillion ranges located within the taconite relief area. The properties receiving this credit are owner-occupied homes and owner-occupied farms. The tax on all the land comprising the farm is used in determining the amount of credit for a farm.

If an owner-occupied home or farm is located in a city or town that contained at least 40 percent of its valuation as iron ore on May 1, 1941, or which had a taconite mine, processing plant, or electric generating facility on January 1, 1977, or currently has a taconite mine, processing plant, or electric generating facility, the taconite credit is 66 percent of the tax, up to a maximum credit of \$315.10 for taxes payable in 2007.

If the property is not located in such a city or town, but is

located in a school district containing such a city or town, the taconite credit is 57 percent of the tax, up to a maximum credit of \$289.80.

The total amount of taconite property tax relief paid in each county and school district is listed in *Figure 7*. An example of the calculation is shown in *Figure 8*.

State laws governing taconite property tax relief are contained in M.S. 273.134 to M.S. 273.136 and M.S. 298.28, Subd. 6. This is guaranteed by the Northeast Minnesota Economic Protection Fund as stated in M.S. 298.293.

b) Electric Power Plant Aid from Property Tax Relief

For any electric power plant located in another county, as described in 5(c), 0.1875 cent per taxable ton (cpt) from the Taconite Property Tax Relief account is paid to the county. The distribution is subject to the M.S. 298.225 variable guarantee. For the 2006 production year, \$20,877 was distributed, with the entire amount coming from the M.S. 298.225 guarantee (calculation details on page 9 under (c) counties).

(c) Electric Power Plant Aid from Property Tax Relief

This subdivision allocates 0.4541 cent per LTV's taxable tonnage to the Cook County school district due to LTV's power plant in Cook County. The distribution is subject to the M.S. 298.225 guarantee at 31.2 percent or the variable rate, whichever is less. For the 2006 production year, \$21,087 was distributed. This is calculated by multiplying the 1983 base of \$67,586 x .312 = \$21,087.

A public works and economic development fund was established for distributions in 2007 only as follows:

*Sec. 13. Minnesota Statutes 2004, section 298.2961, is amended by adding a subdivision to read:

***Subd. 5. Public works and local economic development fund.** For distributions in 2007 only, a special fund is established to receive 38.4 cents per ton that otherwise would be allocated under section 298.28, subdivision 6. The following amounts are allocated to St. Louis County acting as the fiscal agent for the recipients for the specific purposes:

- (1) 13.4 cents per ton for the Central Iron Range Sanitary Sewer District for construction of a combined wastewater facility;
- (2) 6.0 per ton to the city of Eveleth to redesign and design and construct improvements to renovate its water treatment facility;
- (3) 1.0 per ton for the East Range Joint Powers Board to acquire land for and to design a central wastewater collection and treatment system;
- (4) 0.5 cents per ton to the city of Hoyt Lakes to repair Leeds Road;
- (5) 0.7 cents per ton to the city of Virginia to extend Eighth Street South;
- (6) 0.7 cents per ton to the city of Mountain Iron to repair Hoover Road;

- (7) 0.9 cents per ton to the city of Gilbert for alley repairs between Michigan and Indiana Avenues and for repayment of a loan to the Minnesota Department of Employment and Economic Development;
- (8) 0.4 cents per ton to the city of Keewatin for a new city well;
- (9) 0.3 cents per ton to the city of Grand Rapids for planning a fire and hazardous materials center;
- (10) 0.9 cents per ton to Aitkin County Growth for an economic development project for peat harvesting;
- (11) 0.4 cents per ton to the city of Nashwauk to develop a comprehensive city plan;
- (12) 0.4 cents per ton to the city of Taconite for development of a city comprehensive plan;
- (13) 0.3 cents per ton to the city of Marble for water and sewer infrastructure;
- (14) 0.8 cents per ton to Aitkin County for improvements to the Long Lake Environmental Learning Center;
- (15) 0.3 cents per ton to the city of Coleraine for the Coleraine Technology Center;
- (16) 0.5 cents per ton to the Economic Development Authority of the city of Grand Rapids for planning the North Central Research and Technology Laboratory;
- (17) 0.6 cents per ton to the city of Bovey for sewer and water extension;
- (18) 0.3 cents per ton to the city of Calumet for infrastructure improvements; and
- (19) 10.0 cents per ton to an economic development authority in a city through which State Highway 1 passes, or a city in Independent School District No. 2142 that has an active mine, for an economic development project approved by the Iron Range Resources and Rehabilitation Board.

Note: These distributions are paid for by the TPTRA as directed by M.S. 298.2961.

Subd. 7 — Iron Range Resources & Rehabilitation Board

An amount of 6.5 cents per taxable ton escalated by the Gross National Product Implicit Price Deflator is allocated to the Iron Range Resources and Rehabilitation Board (subject to M.S. 298.225 guarantee). The funds are used by the IRRRB for general operating expenses and community development grants.

Subd. 8 — Range Association of Municipalities & Schools

An amount equal to 0.3 cent per taxable ton (subject to M.S. 298.225 guarantee) is paid to the Range Association of Municipalities and Schools (RAMS) to provide an area-wide approach to problems that demand coordinated and cooperative actions. All cities, towns and schools in the taconite and iron ore mining area are included. This amount is subtracted from the Taconite Municipal Aid distribution in Subd. 3.

Subd. 9 — Douglas J. Johnson Economic Protection Trust Fund

In addition to the amount provided in the remainder after all other distributions are completed, 3.35 cents per taxable ton is allocated to the Douglas J. Johnson Economic Protection Trust Fund for production year 1998 and thereafter.

(a) Taconite Economic Development Fund

This subdivision is explained in detail on pages 24 and 26.

(b) Taconite Environment Fund

Five cents per taxable ton must be paid to the taconite environmental fund for use under section 298.2961, subdivision 4. (description is on page 5)

(c) Temporary Distribution; City of Eveleth

For distributions in 2007 through 2011 only, the City of Eveleth shall receive 0.20 cents per taxable ton for support of the Hockey Hall of Fame provided that an equal amount of donations have been received. Any amount of the 0.20 cent per ton that exceeds the donations shall be distributed to the IRRRB.

Subd. 10 — Indexing

Beginning with distribution in 2000 (1999 production year), the amounts determined under Subd. 6, paragraph (a), Subd. 7 and Subd. 9 are increased in the same proportion as the increase in the implicit price deflator as provided in Section 298.24, Subd. 1.

Subd. 11— Remainder

(a) After distributing all other aid, including school bond credits and payments, taconite railroad, and IRRRB payments, remainder is distributed of the two-thirds to the Taconite Environmental Protection Fund and one-third to the Douglas J. Johnson Economic Protection Trust Fund. The remainder includes interest earned on money on deposit by the counties. The amounts in (b) and (c) are taken from the initial amount prior to making the 2/3 - 1/3 distribution to the two funds.

(b) Taconite Railroad

Until 1978, the taconite railroad gross earnings tax was distributed to local units of government based on a formula of 50 percent to school districts, 22 percent city or town, 22 percent county, and six percent state. The respective shares were further split based on miles of track in each government unit. Beginning in 1978, the distributions were frozen at the 1977 level and funded from production tax revenues. The total amount distributed in 2007 is \$2,482,454. Taconite railroad aids are not subject to the percentage reduction mandated for other aids by M.S. 298.225 and so remain constant from year to year. Beginning with the 2002 production year, the taconite railroad distribution to schools was reduced to 62 percent of the 1977 amount.

(c) Occupation Tax Grandfather Amount to IRRRB

In 1978 and each year thereafter, the amount distributed to the IRRRB was the same as it received in 1977 from the distribution of the taconite and iron ore occupation taxes: \$1,252,520.

Additional Payments

Although the following payments are not included in M.S. 298.28 or its subdivisions, they are subtracted prior to dividing the remainder described in Subd. 11.

These payments are listed in detail on page 17 and consist of school bond payments to school districts within the taconite tax relief area and taconite assistance area. Most are funded 80 percent taconite and 20 percent local efforts.

In Laws 2005, Chapter 152, Article 1, Sec. 39 the legislature authorized the Commissioner of IRRRB to issue \$15,000,000 in revenue bonds to make grants to school districts in the taconite relief area or taconite assistance area. The bonds are to be used by the school districts to pay for health, safety and maintenance improvements. The bonds are funded in equal shares from the Taconite Environmental Protection Fund and the Douglas J. Johnson Economic Fund. Minor amendments were made by the 2006 legislature.

**Aid Guarantee
(Minnesota Statute 298.225)**

The recipients of the taconite production tax, provided in M.S. 298.28, Subds. 2 to 5, Subd. 6, paragraphs (b) and (c) and Subds. 7 and 8, are guaranteed to receive distributions equal to the amount distributed to them with respect to the 1983 production year, provided that production is not less than 42,000,000 taxable tons. If the production is less, the amount distributed from the fund is reduced proportionately by two percent per each 1,000,000 tons by which the taxable tons are less than 42,000,000 tons. For example, if the taxable tonnage (three-year average) is 39,800,000, then the proportionate reduction is 4.4 percent. This is calculated by multiplying two percent times 2.2 million tons. This aid guarantee is funded equally from the initial current year distributions to the Taconite Environmental Protection Fund and the Northeast Minnesota Economic Protection Fund. If the initial distributions are insufficient to fund the difference, the commissioner of the IRR makes the payments of any remaining difference from the capital of the Taconite Environmental Protection Fund and the Northeast Minnesota Economic Protection Trust Fund in equal proportions. The commissioner of the Minnesota Department of Revenue determines the amounts. The aid payments covered by this variable guarantee are listed as follows:

1. 4.5 cents—City and Town Fund
2. 12.2 cents—Taconite Municipal Aid
3. 21.3 cents Taconite Referendum Fund
4. 6.5 cents—escalated to IRRRB
5. 0.3 cent—RAMS
6. 0.1875 cent—power plant transfer from Taconite Property Tax Relief Account to Cook County
7. 4.0 cents - Mining Effects Fund (uses 1999 production year as base year)

The following funds are guaranteed at 75 percent or the variable guarantee, whichever is less:

1. 20.525 cents—Taconite County Fund
2. 5.525 cents—Taconite County Road and Bridge Fund

The following funds are guaranteed at 31.2 percent or the variable guarantee, whichever is less:

1. 13.72 cents—Regular School Fund
2. 3.43 cents—Taconite School Fund
3. 0.5625 cent—power plant transfer from Taconite Property Tax Relief Account to School District 166, Cook County

The Taconite Property Tax Relief Account is not covered by M.S. 298.225, but is separately guaranteed by the Economic Protection Fund, as stated in M.S. 298.293.

Taconite Production Tax Distribution Calculation

The taconite mining companies make the production tax payments directly to six counties (Cook, Lake, St. Louis, Itasca, Crow Wing and Aitkin) and the IRR. Each county auditor is responsible for making the taconite aid payments to the various jurisdictions within the county. St. Louis County was designated as fiscal agent for the taconite property tax relief account and issues taconite property tax relief checks to the other counties. The State of Minnesota also made a payment of \$0.22 cents per taxable ton (payable 2007). This money was added to the amount available for distribution.

The Minnesota Department of Revenue makes all computations regarding the amount paid by the companies, state and the aid payments due to cities, schools, townships and counties. Interest earnings on undistributed funds are remitted by the counties to the IRR.

The proceeds of the 2006 taconite production tax (payable 2007) are distributed by state law as follows (*all figures are cents per taxable ton*):

<u>M.S. 298.28 – Payment recipients</u>		<u>Cents per ton</u>
Subd. 2a	Taconite cities and towns	4.5
Subd. 2b	Taconite cities and towns (mining effects)	4.0
Subd. 3	Taconite municipal aid account	12.2
Subd. 4	School districts	
	(b) Taconite schools (mining and/or concentrating in the district)	3.43
	(c) School districts within the taconite relief area (distributed by formula)	13.72
	Basic school district total	17.15
	(d) Taconite Referendum Fund	
Subd. 5	Counties (formula amount - see page 8)	
	(b and c) Taconite counties (includes electric power plant)	20.525
	(d) Taconite counties road/bridge	5.525
	Counties total:	26.05
Subd. 6	Taconite property tax relief (includes .6416 cents for Cook County and Cook County schools)	33.9*
Subd. 7	IRRRB	6.5*
Subd. 8	Range Association of Municipalities and Schools	0.3
Subd. 9	Douglas J. Johnson Economic Protection Trust Fund	3.35*
Subd. 9a	Taconite Economic Development Fund	30.1
Subd. 9b	Taconite Environmental Fund for use in Producer Grant & Loan Fund	5.0**
Subd. 9c	City of Eveleth (for Hockey Hall of Fame)	0.2***
Subd. 10	Indexing provisions	--
Subd. 11	Distribution of remainder	--

* These funds are escalated using the Gross Domestic Product Implicit Price Deflator. After escalation, the cents per ton for Taconite Property Tax Relief was 38.49 cents, IRRRB was 7.69 cents, and the Northeastern Minnesota Economic Protection Fund was 3.90 cents.

** Plus amount of revenue due to tax increase generated in pay 2005.

*** Provided through 2010 production year.

The full amount distributed, including escalation and M.S. 298.225 guarantees, is listed in Figure 10.

Feb. 2006	\$6.488 million	Loan to Mesabi Nugget

* 1996 M.S. 298.2961

** Section 20 of 2001 legislation amended M.S. 298.225 (aid guarantees) to extend payments for certain cities and townships.

The Taconite Area Environmental Protection Fund (TEPF), M.S. 298.223 and the Douglas J. Johnson Economic Protection Trust Fund (DJJ), formerly known as Northeast Minnesota Economic Protection Trust Fund, M.S. 298.291 through 298.294, were established by the 1977 Legislature. These two funds receive the remainder of the production tax revenues after all distributions are made according to M.S. 298.28. The remainder is split with one-third going to the DJJ and two-thirds to the TEPF.

The TEPF was created for the purpose of reclaiming, restoring and enhancing those areas of Minnesota that are adversely affected by environmentally damaging operations involved in min-

ing and producing taconite and iron ore concentrate. The scope of activities includes local economic development projects. The Iron Range Resources commissioner administers the fund. The Iron Range Resources Board and the governor must approve projects.

The DJJ is somewhat different in that only interest and dividends earned by the fund may be spent before January 1, 2028. Expenditures from the principal may be made with approval from the Iron Range Resources Board for economic development projects.

Taconite Property Tax Relief

The taconite homestead credits described on page 9 are administered by the county auditors. The amounts payable in 2006 are listed in *Figure 7* below. Distribution is determined by the formula described on page 15. The amounts do not equal the total production tax allocated for property tax relief shown in the tables as collections or payments. The

difference is carried in the Taconite Property Tax Relief Fund balance with St. Louis County as fiscal agent. If the fund balance and production tax collections are not sufficient to make the payments, the deficit is made up from the Douglas J. Johnson Economic Protection Fund. The last time this occurred was in 1989.

Figure 6

Taconite Property Tax Relief Fund Balance				
Year payable	Payments into account*	Interest & other	Payments out (by formula)	Balance December 31
1992	\$10,891,942	\$411,356	\$8,308,617	\$8,800,006

2142 - St. Louis County	2,408	1,872,240				
2154 - Eveleth-Gilbert	1,240	940,309				
2711 - Mesabi East	882	903,264				
Total (Payable 2006)	\$26,740	\$11,373,954				

Mobile homes are taxed differently from other real estate in that they are assessed and taxed in the same year.

The supplemental property tax relief paid from the State General Fund revenue to Deer River (Itasca Co.), Floodwood (St. Louis Co.), Aitkin, Crosby-Ironton and Grand Rapids is not included in any of the production tax tables.

The aid amounts in Figures 10, 11 and 13 do not include taconite property tax relief.

				38,335	2.203

* The 1977 law was the first to apply the production tax rate against *taxable tons*, the greater of the current year's production, or the three-year average of production tons. The taxable tonnage for 1984 was the current year only. The taxable tonnage for 1985 was the average tonnage for 1984 and 1985. A three-year average is used for 1986 and beyond.

Direct Reduced Iron (DRI)

The recent worldwide interest in direct reduced iron (DRI) has caused some taconite producers to explore the possibility of building a DRI plant in Minnesota. Recognizing this trend, the Legislature has taken action to encourage DRI production in Minnesota.

Reduced Production Tax Rate for DRI

The first five years of a DRI plant's commercial production are subject to reduced tax rates. Commercial production is defined as more than 50,000 tons.

Years of operation	% of regular rate	Years of operation	% of regular rate
1	0%	4	50%
2	0%	5	75%
3	25%	6	100%

The taconite production tax rate for DRI is the regular rate plus an additional 3 cents per gross ton for each 1 percent that the iron content exceeds 72 percent when dried at 212 degrees Fahrenheit. Thus, at a base production tax rate for 2007 at \$2.258 per ton, the tax rate for 90 percent iron DRI would be \$2.798. The rate for 95 percent DRI would be \$2.948.

A number of economic development packages to build a DRI plant or a non-ferrous plant are offered by the State of Minnesota and Iron Range Resources (IRR) and the U.S. Government. These are detailed on the IRR page.

General Information

Because it is subject to the taconite production tax, a DRI production plant and facilities is exempt from regular ad valorem property taxes. The taxable tonnage is based on a three-year production average. Pig iron is considered DRI for the purpose of production tax and incentives.

A steel plant or a non-ferrous (base or precious metal) mine or plant would be subject to ad valorem (property) taxes as would any other business. If a steel plant were in conjunction with DRI plant, the DRI portion would be subject to the taconite production tax, thus exempt from ad valorem (property) taxes.

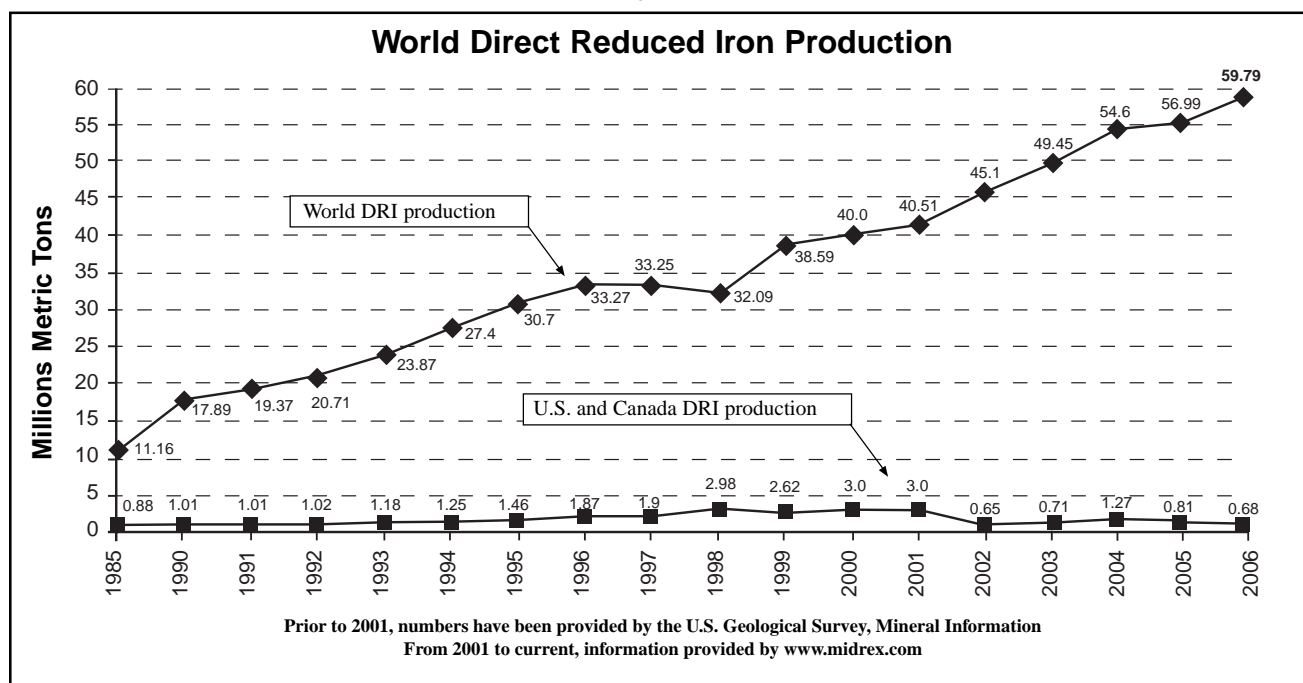

The 2004 legislature authorized a streamlined environmental permitting procedure to allow a DRI plant to be built at the closed LTV site near Hoyt Lakes, and the IRR is engaged in negotiations concerning an economic incentive package.

Electric Power Plant Personal Property Exemption (M.S. 272.027, Subd. 3)

Tools, implements and machinery of an electric generating facility are exempt if all the following requirements are met:

1. The electric generating facility has a capacity of at least 450 megawatts;
2. The electric generating facility is adjacent to a taconite mine direct reduction steel mill; and
3. The electric generating facility supplies more than 60 percent of its electricity in the prior year to the adjacent direct reduction plant and steel mill.

Figure 19

Iron Range Resources and Rehabilitation Agency

Iron Range Resources is a unique Minnesota state agency charged with the economic development and diversification of a region in northeastern Minnesota defined by Minnesota Statute §273.134 as the Taconite Assistance Area (TAA), including all or parts of Cook, Lake, St. Louis, Itasca, Aitkin and Crow Wing Counties. Iron Range Resources was created in 1941 as part of a legislative compromise to limit ad valorem taxes on mining. It was funded from occupation taxes for its first 30 years. It is now funded by taconite production taxes, which are paid by mining companies in lieu of local property taxes. The agency receives no direct operational funding from the State of Minnesota General Fund. The production tax essentially replaces the local tax obligations that the taconite producers otherwise would have to local governments. That, coupled with the TAA's dependence on the taconite industry and the cyclical nature of the steel industry it serves, caused the State Legislature to create Iron Range Resources to serve northeastern Minnesota.

Iron Range Resources is headquartered in Eveleth. A commissioner, who is appointed by the governor, directs the agency. Effective July 1, 1999, the commissioner is advised by a board comprised of five state senators, appointed by the Senate majority leader, and five state representatives, appointed by the House speaker, a majority of whom must come from TAA districts. Three citizens from the TAA also are appointed, one each by the Senate majority leader, House speaker and governor.

While economic development of the TAA through loans and grants to businesses and local governments is Iron Range Resources' main focus, the agency also owns two tourism facilities, Giants Ridge Golf and Ski Resort in the city of Biwabik, and Ironworld Discovery Center located in Chisholm. Giants Ridge operates two 18-hole championship golf courses and a winter sports area to standards that have earned national recognition. Giants Ridge offers 35 alpine ski runs, more than 60 km of cross-country ski trails and easy access to lakes, mountain bike trails and snowmobile trails.

The Ironworld Discovery Center history museum is managed by the nonprofit Ironworld Discovery Corporation. The change in management occurred this year.

The Ironworld campus is also home to Iron Range Resources' Mineland Reclamation Program which undertakes safety, environmental and economic development projects on abandoned minelands of the pre-taconite era, often in cooperation with adjacent communities. In 2006, Mineland Reclamation grew 300,000 containerized seedlings for planting on the Mesabi, Vermilion and Cuyuna iron ranges.

Iron Range Resources funds destination marketing activities in cooperation with many community and regional tourism partners in both the public and private sectors. The agency provides technical assistance to tourism development organizations to enhance tourism and quality of life.

Iron Range Resources also is helping to diversify Minnesota's iron mining industry by supporting the development of value-added iron and steel products and non-ferrous minerals. Mesabi Nugget is one of these projects. Mesabi Nugget will produce 96 percent pure iron nuggets directly from iron ore, which then can be shipped to electric furnaces, basic oxygen furnaces and foundries to make steel, which would allow Minnesota to expand its iron ore customer base. Construction of the production-scale iron nugget plant at the Cliffs Erie site near Aurora-Hoyt Lakes has begun and is scheduled to be completed in 2009. Minnesota Steel, another value-added project, continues to move towards building a slab steel production facility in Itasca County near Nashwauk. Permits and financing are expected in 2007. A \$1.7 million project to analyze, test market and promote taconite by-products for use in the Midwest aggregate industry is underway as well.

Iron Range Resources also is enthusiastic about the possibilities non-ferrous minerals development holds for Minnesota. The deposits that show the greatest commercial potential are PolyMet's NorthMet Project, Teck Cominco's Mesaba Project, Franconia Minerals' Birch Lake Project and Duluth Metals' Nokomis Deposit. Each of these deposits are potential copper, nickel, and precious metals commercial projects that will require additional financing, exploration and mineral processing development.

For fiscal year 2008, the Iron Range Resources Board has approved an operating budget of \$28,161,644 to deliver the projects, programs and activities previously mentioned. The agency proposes to do so with a budgeted complement of 55 full-time employees as well as a number of temporary and seasonal personnel.

Iron Range Resources also assists the taconite industry, including \$125,436,172 made available since 1993 to the Minnesota taconite producers for investments in new equipment, facilities and research. This is made possible through the rebate of production taxes from the Taconite Economic Development Fund (TEDF, Minnesota Statute §298.227). In 2001, the Legislature made the TEDF permanent and increased the distribution by 14.7-cents per ton to 30.1-cents beginning in 2002.

The agency has provided an additional \$46,389,561 since 1993 to the taconite producers through its Taconite Assistance Program, Producer Grant Program (PGP, Minnesota Statute §298.2961) and other assistance. This amount includes \$10 million appropriated in 1996 from the Douglas J. Johnson Trust Fund for the PGP through which Iron Range Resources provided grants to taconite producers for environmentally unique reclamation projects and facility improvements.

During 1993-2007, Iron Range Resources has reinvested a total of \$171,825,733 in the Minnesota taconite industry through the above programs. These dollars have leveraged \$204 million from the producers to undertake projects totaling \$363 million.

FY 08 Iron Range Resources Budget

(As approved by the Iron Range Resources Board on July 17, 2007)

Source of funds:	All accounts ¹	Board ²	TEPF ³	DJJ ⁴	Supp tax ⁵

Occupation Tax on Taconite and Iron Ore

(Minnesota Statute 298.01 — 298.18)

The Minnesota Constitution mandates that the state impose an occupation tax on the business of mining. In order to meet this constitutional requirement, the occupation tax is generally computed in accordance with the Minnesota corporate franchise (income) tax. The AMT for occupation tax was repealed in 2006. Transition provisions allow for unused AMT credit amounts against occupation tax due after December 31, 2005.

The occupation tax is paid in lieu of the corporate franchise tax; therefore, mining companies are exempt from corporate income tax.

Changes in Apportionment

In 2006 the legislature amended M.S. 298.01, subdivision 3 to define all sales, wherever originated, as Minnesota sales. So 100 percent (75-12.5-12.5) of net income is assigned to Minnesota. The rate was changed from 9.8 percent to 2.45 percent. This change results in no additional tax and is effective for tax years beginning after December 31, 2005.

Occupation Tax Return

The starting value of the occupation tax is the mine value, determined by the commissioner of the Minnesota Department of Revenue and published in the annual *Occupation Tax Directive*.

Generally, occupation tax is determined in the same manner as the corporate franchise tax imposed by M.S. Section 290.02 but there are two exceptions:

- 1) The tax is *nonunitary* because it applies only to the Minnesota mine and plant.
- 2) Mining companies are allowed percentage depletion.

The occupation tax applies to both ferrous and nonferrous minerals, including not only taconite and iron ore, but other minerals such as gold, silver, copper, nickel and titanium. The occupation tax due date is May 1 of the following year but companies may choose a seven-month extension to file.

Readers with questions about the occupation tax mine value or how the return is prepared are invited to contact the Minnesota Department of Revenue, Minerals Tax Office, Eveleth.

Mine Value

The procedure to determine any change in mine value was developed by the Minnesota Department of Revenue and representatives from the taconite industry. The procedure used since December 1990 is:

- 1) Seventy-five percent of the change in mine value is based on the change in the Steel Mill Products Index (SMPI) from June of the previous year to June of the current year; and
- 2) Twenty-five percent of the change in mine value reflects the actual transaction prices of taconite pellets sold in nonequity sales.

A copy of the *Final Directive* and backup for 2006 are on the following two pages. They show how the value per Fe (iron) unit is determined.

Occupation Tax Distribution

All occupation tax revenue (per M.S. 298.17) is credited to the general fund. Of this amount 10% is used for the general support of the University of Minnesota and four-ninths of 90% is used for elementary and secondary schools. (10% to university + 40% to schools + 50% remaining)

Region 3: An amount equal to one and one-half cents per taxable taconite ton is appropriated from the occupation tax to the IRRR for counties in Region 3 not qualifying for taconite property tax relief. Only Carlton and Koochiching counties qualify. These funds must be used to provide economic or environmental loans or grants. The amount distributed in 2007 was \$589,470 based on 39,297,977 taxable tons produced in 2006. Prior to 1998, the amount distributed was based on one cent per taxable ton. If the remaining 50 percent is insufficient to equal the 1-1/2 cents per ton after the constitutional distribution to education, the remainder to the two counties is reduced.

Final Directive - 2006 Occupation Tax

Basic data for preparing 2006 occupation tax reports

Taconite

The starting point for occupation tax is the mine value, such as the value of taconite pellets *after* beneficiation or processing, but *prior* to any stockpiling, transportation, marketing and marine insurance, loading or unloading costs.

Dry basis reporting. The production tonnage for both occupation tax and production tax must be reported on a dry basis. The reported weights and analysis must correspond. For example, the weighing and sampling *must* take place at or near the same location. No moisture addition or drying should occur between the points of sampling and weighing. Weighing at a location removed from the point of sampling may be used with approval and verification of the Minnesota Department of Revenue.

Non-arms-length transactions. When taconite pellets, chips or concentrate are used by the producer or disposed of or sold in a *non-arms-length transaction*, the mine value must be determined using the values below.

Non-arms-length transactions include, but are not limited to, any sales or shipments to: 1) any steel producer having any ownership interest in the selling or shipping company, or 2) any steel producer affiliated or associated with any firm having any ownership or other financial interest in the selling or shipping company.

Non-equity (arms-length) transactions. When taconite (pellets or concentrate) is sold by the producer in a non-equity or arms-length transaction, the mine value (for occupation tax purposes) must be either: 1) the actual sales price (f.o.b. mine); or 2) the mine value as determined using the prices below.

The mining company may elect either option, but *once it selects an option, it must continue to use that option for all arms-length transactions.*

Taconite producers with nonequity sales since 1990 have made their election. Only those with first-time nonequity sales in 2006 may select the actual sales price option for the first time. Any request for a change in the option elected must receive approval from the Minnesota Department of Revenue. Transactions must meet the definition of non-equity (arms-length) transactions previously defined.

Flux Pellets. Any company utilizing the *production tax weight reduction for flux additives* must use the flux pellet value for that production. The fluxed pellet production weight must include the weight of the flux additive for occupation tax purposes only.

Chips, Fines and Concentrate. A separate mine value for pellet chips (fines) and concentrate is used. The value of acid pellet chips or concentrate is 75 percent of the value of acid pellets. Flux pellet chips or concentrate is valued at 75 percent of the producers' flux pellet value. In order to qualify for this lower mine value, pellet chips must qualify for the Taconite Economic Development Fund. The chips or concentrate can be stockpiled or shipped, but the chips cannot be commingled with or shipped with regular pellets. All production or shipments not meeting this definition must be valued at the appropriate higher pellet value.

Taconite Values	
<i>Pellet price per Fe (iron) unit (per dry gross ton) for the period Jan. 1, 2006 through Dec. 31, 2006:</i>	
Taconite product	Mine value
Acid pellets	\$0.826 per iron unit
Pellet chips (fines) and concentrate	75% of acid or fluxed pellet price
Flux Pellets – partial flux (.1% – 1.99% flux)*	\$0.826 + \$0.015 = \$0.841
Flux (2.00% and higher flux) *	\$0.826 + \$0.015 per iron unit for each 1% flux
Example: Pellet with 4.8% flux in finished pellet: 4.0 x \$0.015 = \$0.060	
Mine value: \$0.826+ \$0.060 = \$0.886	

* The percentage of flux in the pellets for occupation tax purposes will be as determined by the formula for the production tax flux credit.

Backup 2006 Data to Final Directive

2006 Occupation Tax Report

Backup data

Final Directive

The 1990 agreement between the taconite producers and the Minnesota Department of Revenue provided that any change in mine value would be determined by two factors:

1. the change in the Steel Mill Products Index (SMPI) from June of the prior year to June of the current year (75 percent); and
2. the change in the actual selling price of non-equity sales (25 percent).

The directive was determined using the final adjusted June 2005 SMPI (156.3) and final, adjusted June 2006 SMPI (174.1). The nonequity sales factor was developed from completed reports provided by the taconite producers and steel companies making *nonequity sales and/or purchases of taconite pellets*.

Acid Pellets — How Value is Determined

The mine value of acid pellets is determined by the change in the SMPI between June 2005 and June 2006 and the non-equity sales per dry gross ton Fe (iron) unit. The price of all non-equity pellet sales is converted to an acid sales price.

Steel Mill Products Index (SMPI)			
June, 2005 SMPI (Final)	156.3	2005 Mine Value	\$0.7102
June, 2006 SMPI (Final)	174.1	2006 SMPI % of 2005 Value x	<u>111.388%</u>
174.1 ÷ 156.3	=	111.388%	2006 SMPI Factor
			\$0.791

Non-equity Sales		
Weighted average all pellet sales price	Total Fe (iron) units	Weighted average sales price per Fe (iron) unit
\$447,007,829	÷	479,241,113
		= \$0.933

Acid Pellet Mine Value		
SMPI	\$0.791 x 75%	= \$0.593
Nonequity sales	\$0.933 x 25%	= <u>0.233</u>
		\$0.826
		2006 acid pellet mine value
		\$0.826 per Fe (iron) unit

Flux Pellets - How to Determine Value

The value of flux pellets is determined by the amount of flux in the finished pellet as determined for production tax purposes.

Partial flux - Pellets with 1.99 percent or less flux will be valued at \$0.015 per Fe (iron) unit higher than acid pellets:
 $\$0.826 + \$0.015 = \$0.841$

Flux - Pellets containing two percent flux or more will be valued at \$.015 per Fe (iron) unit *per each one percent of flux* in the finished pellet. Percentages are: 2% – 2.99%; 3% – 3.99%, etc.

$$\text{Percent (\%) flux in finished pellet (4.8\%)*} \quad 4.0 \times \$0.015$$

*(From page 1 - *Production Tax Report*) rounded down to the closest percent, for example, 4.82% rounded to 4%.

The Mine Value of Flux Pellets (4.82% Flux) is: $\$0.826 + \$0.060 = \$0.886$ per Fe (iron) unit.

Mine Value - Chips and Concentrates

A pellet chip and concentrate value is included for companies selling pellet chips or concentrate. Acid chips or concentrate is valued at 75 percent of the acid pellet price. Flux chips or concentrate is valued at 75 percent of the flux pellet value. Concentrate sold or shipped without being processed into pellets uses the same value as chips.

Figure 23

Occupation Tax Mine Value-Taconite (Historical Summary)

Year	Acid pellet price per Fe unit		Percent Fe		Lake Erie value per ton	Less transportation		Mine value
1965	\$0.25200	x	65.00%	=	\$16.38	\$3.64	=	\$12.740

	Flux (4%)	0.47315	+ .062	=	.53515	x	62	=	33.18
2004	Acid	0.62617			x	65	=	40.70	
	Flux (4%)	0.62617	+ .062	=	.68817	x	62	=	42.67
2005	Acid	0.7102			x	65	=	46.16	
	Flux (4%)	0.7102	+ .062	=	.7722	x	62	=	47.88
2006	Acid	0.826			x	65	=	53.69	
	Flux (4%)	0.826	+ .060	=	.886	x	62	=	54.93

* Beginning in 1991, the value of flux pellets was modified to \$.0155 per each one percent flux in the pellets. Starting in 2006, this was changed to \$.015.

A lower value of 75 percent of the pellet price is allowed for chips and fines.

1. This average value will not match the values on *Figure 24*, because this is an average of all taconite produced (acid, flux, chips, concentrate).
2. Transportation consists of the rail and lake transportation allowance and marketing and marine insurance from the occupation tax directives through April 30, 1987.
3. Cost of beneficiation includes beneficiation labor, supplies, depreciation, interest, and miscellaneous, *Figure 30*.
4. Cost of mining is the total mining labor, mining supplies and depreciation, *Figure 30*.

For 1990 and later, the information on the above table comes from the *Production Cost Summary Information Report* (based on the pre-1990 *Occupation Tax Report*). *Occupation Tax Report* no longer provides this detail.

For 1990 and later, the information on this table is based on the *Production Cost Summary Information Report* (from the pre-1990 *Occupation Tax Report*).

Income Tax Withholding on Mining and Exploration Royalty

(Minnesota Statute 290.923)

Income tax withholding is a 6.25-percent tax assessed on exploration and/or mining royalty income. This section defines royalty, identifies who must pay the tax, and outlines the statutory requirements of both the royalty payer and the royalty recipient. Also included is the royalty cost by company per ton of pellets produced (*Figure 32*) and the industry-wide cumulative total royalty paid and income tax withholding (*Figure 31*).

Royalty is defined as any amount (in money or value of property) received by any person having any right, title or interest in or to any tract of land in Minnesota for permission to explore, mine, take out or remove ore. Ores subject to withholding are iron, taconite, and other minerals (copper, nickel, gold, etc.) subject to the net proceeds tax. Royalties may include rents, bonus payments, and non-recoverable lease payments.

Withholding Income Tax on Royalties

All payers of mining or exploration royalties are required to withhold and remit an income tax of 6.25 percent on royalties paid for use of Minnesota lands (effective Jan. 1, 2001). **Note:** This does not include royalties paid to partnerships, S corporations and C corporations. Royalties paid to these entities should not have income tax withheld. See below for information on royalties paid to trusts.

Royalty payers have the option of reporting royalty withholding with their regular wage/salary withholding, or reporting it under a separate Minnesota tax ID number used for royalty withholding only. If you choose to report royalty withholding separately, you must first register for a separate ID number. Go to the department's website at www.taxes.state.mn.us and register for an ID number online or call 651-282-5225. Then, file your royalty withholding returns separately from your wage/salary withholding. All withholding returns must be filed electronically through the department's e-File Minnesota system. Go to the department's website for more information.

Federal Form W-4. Royalty payers must have all new employees complete federal Form W-4 to determine their federal and Minnesota withholding allowances. For Minnesota, employees may claim up to, but not more than, the number of federal allowances they claim.

Keep all W-4 forms in your records.

If they choose the same number of federal and Minnesota withholding allowances, only one W-4 form is necessary. If they claim fewer Minnesota withholding allowances than federal allowances, they must complete a second W-4 form listing the Minnesota allowances (write "Minnesota Only" across the top of the Minnesota allowances form). If the employee does not provide a completed W-4 before the first wage payment, withhold tax as if he or she is single with no withholding allowances.

You are not required to verify the number of withholding allowances claimed by each employee. You should honor each W-4 form unless we notify you that it is not valid.

You must, however, send the department a copy of any W-4 form on which:

- an employee claims more than 10 withholding allowances;
- an employee claims to be exempt from Minnesota withholding and you reasonably expect the wages to exceed \$200 per week, unless he or she has completed Form MWR, *Reciprocity Exemption/Affidavit of Residency*; or
- you believe an employee is not entitled to the number of exemptions he or she claimed.

Send required W-4 copies to: Minnesota Revenue, 612 Pierce St., Eveleth, MN 55734-1611.

If you don't send us a copy of Form W-4 when required, you are subject to a \$50 penalty for each required certificate you do not send. An employee who knowingly files an incorrect W-4 form will be subject to a \$500 penalty for each incorrect certificate filed.

Federal Form 1099 MISC. Royalty payers must also provide each royalty recipient with a federal Form 1099 MISC by January 31 for royalties paid during the previous year. Follow the federal requirements to issue 1099s to persons to whom you made payments. Enter MN in the "State" space, and fill in the amount of Minnesota income tax withheld for that royalty recipient during the year.

Mail the 1099s by March 1 to: Minnesota Revenue, Mail Station 1173, St. Paul, MN 55146-1173. Also mail a copy to: Minnesota Revenue, 612 Pierce St., Eveleth, MN 55734-1611.

Magnetic Media Reporting. Royalty payers who are required to send federal W-2 wage detail and 1099 information on magnetic media are required to submit that information to Minnesota on magnetic media as well. Use Social Security Administration (SSA) Publication (MMREF-1), IRS Publication 1220, and the department's Fact Sheet 2 to prepare your magnetic media for Minnesota. Minnesota accepts returns on magnetic media allowed by the federal government, except reel-to-reel tapes and cartridges.

Royalties Paid to Trusts

Simple trusts (i.e., trusts that distribute all royalty income to their beneficiaries) are exempt from withholding on royalties unless they elect to have tax withheld by the royalty payer. If the trust elects to have tax withheld, it must notify the royalty payer of its decision by providing the payer with a federal W-4 form. If the trust chooses tax-exempt status, the trust becomes the "royalty payer" and is responsible for withholding tax from its beneficiaries as well as complying with all withholding tax requirements, including:

- Informing beneficiaries of the requirements to withhold tax and providing them with W-4 forms;
- Providing beneficiaries with 1099 MISC forms each year by January 31 for royalties received the previous year; and
- Filing all required withholding returns electronically with the State of Minnesota.

Royalty Recipients

Individuals who had no Minnesota income tax liability in the preceding year and reasonably expect to have no liability for the current year are exempt from the withholding tax. Nonresident individuals will not incur a Minnesota income tax liability for 2007 and are not required to file a Minnesota individual income tax return if their Minnesota assignable gross income is less than \$8,750. A W-4 exemption certificate must be filed with the royalty payer so that Minnesota income tax will not be withheld from the royalties received.

If tax is incorrectly withheld by the royalty payer, the royalty recipient must file a Minnesota income tax return, M-1NR, to obtain a refund. Royalty recipients *are not* eligible to use percentage depletion on their individual income tax returns.

Questions

Questions should be directed to the Minnesota Department of Revenue, Minerals Tax Office, Eveleth.

An instruction booklet, *Minnesota Income Tax Withholding*, is available on the department's website. Although the booklet is designed for withholding on Minnesota wages, the general filing requirements also pertain to royalty withholding.

Royalty Tables

The royalty costs per ton beginning in 1976 to the present are shown in *Figure 33*.

Figure 31

Royalty Paid and Income Tax Withheld (Taconite, natural ore and others)		
Year	Royalty paid	Income tax withheld
1997	\$53,902,838	\$582,936
1998	\$52,945,700	\$446,258
1999	\$49,904,447	\$493,350
2000	\$54,225,938	\$414,658
2001	\$45,448,947	\$265,587
2002	\$37,903,733	\$142,422
2003	\$45,173,508	\$216,629
2004	\$56,726,329	\$214,962
2005	\$77,298,269	\$332,015
2006	\$86,238,285	\$238,142

Royalties paid to the state on state-managed mineral lands are not subject to withholding tax. However, these revenues are allocated by law primarily for educational purposes.

The Minnesota Department of Natural Resources manages state-owned mineral rights for the permanent school fund, permanent university fund, and taxing districts throughout the state. Interest and dividends from the permanent school fund are distributed to school districts throughout the state. Interest and dividends from the permanent university fund are split between a scholarship account for students at the University of Minnesota and for minerals research conducted by the Natural Resources Research Institute.

Revenue from mining on tax forfeited lands is split between the state's general fund (20 percent) and local taxing districts (80 percent). From the 80 percent distributed to local taxing districts, 3/9 of the revenue goes to the county, 4/9 to the school district and 2/9 to the township or city where the mining occurs.

For more information, contact the Transactions Section, Lands and Minerals Division, DNR, in St. Paul (see address and phone information before the table of contents).

** Reserve's/Northshore's royalty costs per ton are based primarily on shipments, not production.

*** Royalty stated on a calendar year (cash) basis with overrides to partners subtracted since 1980. Tonnages used are a dry basis, which began in 1990.

Figure 33

Sales and Use Tax Taconite and Iron Ore

(Minnesota Statute 297A)

The general Minnesota sales and use tax is a broad-based tax on consumer expenditures. The tax is imposed on the sale of tangible personal property or services to the final consumer. A number of exemptions reduce the size of the actual sales and use tax base. In addition, different tax rates apply to several products. The current sales tax rate is 6.5 percent.

Sales and use taxes are essentially identical taxation of tangible personal property. Sales tax is assessed by the seller at the time of the sale. Use tax is paid by the purchaser or user when no sales tax is paid at the time of the sale.

Industrial Production Exemption

The industrial production exemption, M.S. 297A.25, Subd. 9, allows industry to exempt items from sales and use tax that are used or consumed in the production of personal property intended to be sold ultimately at retail, whether or not the item used becomes an ingredient or constituent part of the property produced. Items included in the exemption are chemicals, fuels, petroleum products, lubricants, packaging materials, electricity, gas, and steam. Explosives, a major item for the mining industry, are exempt under the chemical classification. Note: A fact sheet, *Taconite and Iron Mining, number 147*, is available on the department's website.

The 1971 Minnesota legislature approved the production materials exemption (M.S. 297A.25, Subd. 15) exclusively for the taconite mining industry. This statute allows an exemption from sales tax on grinding rods, grinding balls, and mill liners that are substantially consumed in the production of taconite. During the process, this material is added to, and becomes a part of, the product processed. For the purpose of the exemption, the term *mill* includes all facilities used to reduce and process ore.

In 1974, the Minnesota legislature amended the industrial production exemption (M.S. 297A.25, Subd. 9) to cover accessory tools. The accessory tool exemption is available to all manufacturing-type businesses. The legislature, in defining what qualifies as an accessory tool, set three standards that must be met: 1) an item must be separate and detachable; 2) it must have a direct effect on the product; and 3) it must have a useful life of fewer than twelve months. In mining, shovel dipper teeth, shovel bucket lip and lower wing shrouds, cat and grader blade cutting edges, drill bits and reamers qualify for this exemption.

The 1994 legislature expanded the law to exempt materials, including chemicals, fuels and electricity purchased by persons engaged in industrial production to treat production process waste.

Beginning July 1, 2001, all sales and use tax information must be filed electronically over the Internet (www.taxes.state.mn.us) or by phone (1-800-570-3329).

Capital Equipment Refund

If you buy or lease qualifying capital equipment or replacement capital equipment for use in Minnesota, you are eligible for a refund of all, or a part of, the Minnesota and any local sales or use tax paid.

Capital equipment means machinery and equipment used by the purchaser or lessee primarily for manufacturing, fabricating, mining, or refining a product to be sold ultimately at retail. Both purchasers and lessees of capital equipment are eligible for a full refund of the sales or use tax.

Replacement capital equipment means machinery and equipment to replace qualifying capital equipment; repair and replacement parts, accessories and upgrades to qualifying equipment; foundations for qualifying equipment; and special purpose buildings. Beginning July 1, 1998, purchases or leases of replacement capital equipment are eligible for a **full** refund of the sales and use tax paid.

You must pay sales tax when you buy or lease capital or replacement capital equipment. If the seller does not charge you sales tax, you must report and pay use tax on the equipment. To get a refund of sales or use tax paid, you must file a capital equipment refund claim, Form ST-11. You may file no more than two capital equipment refund claims in a calendar year.

A claim must be filed within three and one-half years from the due date of the return, or within one year of the date of an order assessing liability (if the liability has been paid in full), whichever is longer.

Capital equipment is not the same as capitalized assets. Items capitalized for accounting purposes do not automatically qualify as capital equipment. Items that you expense for accounting purposes, such as leased equipment, may be considered capital equipment for refund purposes.

Capital equipment does not include:

- Agriculture, aquaculture, and logging equipment; or
- Motor vehicles taxed under Minnesota Statutes, section 297B (vehicles for road use).

Electronic Funds Transfer

Companies with a sales and use tax liability of \$120,000 per fiscal year (July 1 through June 30) are required to remit the tax using electronic funds transfer (EFT). The due date for remitting the tax is the 14th of the month following the month of the sale. The return must be filed by the 25th of the month.

If actual amounts are not available by the 14th of the month, an estimate of the net amount to be paid may be remitted by using one of the following options:

- 100 percent of the previous month's sales and use tax;
- 100 percent of the tax paid in the same month of the previous year; or
- 95 percent of the actual amount.

The balance is due on the 25 of the month. You must also make this payment electronically. If there is an overpayment of tax, the Department of Revenue will issue a refund. Do not take credit on any other return for an overpayment.

Voluntary EFT payers are companies not required to file electronically but elect to do so. The returns and payments are due on the 20 of the month following the filing month. If you are required to pay any business tax to the Department of Revenue by EFT, you must pay all business taxes by EFT.

Effective for returns due after 1994, the June estimated payment will only be required from those who are required to pay by EFT. Filers who are not required to pay electronically are no longer required to file an estimated June return. All filers required to pay electronically must make an estimated payment for their June tax liabilities. The estimate must be 75 percent of the June liability and must be made two business days before June 30.

Figure 34

Use Tax Paid			
Year	Use tax	Refund claims*	Net use tax

2006	23,191,259	14,446,391	8,744,868

* These are capital equipment refund claims allowed, not including interest, for new or expanding businesses and for repair and replacement parts.

Capital Equipment Exemptions and Refunds

Title	Company responsibility	Refund procedure
Industrial Production Exemption M.S. 297A.25, Subd. 9	File Exemption Certificate (ST-3) or Direct Pay Permit with vendor	No tax collected
Taconite Production Material Exemption* M.S. 297A.25, Subd. 15	File Exemption Certificate (ST-3) or Direct Pay Permit with vendor	No tax collected
Capital Equipment Exemption (refund) M.S. 297A.01, Subd. 16 (definition) M.S. 297A.25, Subd. 42	Must pay the sales tax or assess use tax	File for 6.5% refund on Form ST-11
Replacement Capital Equipment (refund) (Taconite mining company only)* M.S. 297A.01, Subd. 16F	Must pay the sales tax or assess use tax	File for 6.5% refund on Form ST-11
Replacement Equipment (refund) M.S. 297A.01, Subd. 20 (definition) M.S. 297A.02, Subd. 5 (imposition of tax)	Must pay the sales tax or assess use tax	File for 6.5% refund on Form ST-11
Minerals Production Facilities Exemption M.S. 297A.2573 (refund)	Must pay the sales tax or assess use tax	File for 6.5% refund on Form ST-11

What is the Mineral Production Facilities Exemption?

The Mineral Production Facilities exemption was enacted by the 1994 legislature and says that the purchase of materials to construct *any* of the following types of facilities is exempt. This includes materials to construct buildings to house the equipment even though the buildings, when completed, become real property.

1. A value-added iron products plant that may be either a new plant or facilities incorporated into an existing facility that produces iron upgraded to a minimum of 75 percent iron content or any iron alloy with a minimum metallic content of 90 percent.

2. A facility used for the manufacture of fluxed taconite pellets.
3. A new capital project that has a total cost of more than \$40,000,000 that is directly related to production, cost or quality at an existing taconite facility that does not qualify under 1 or 2, above.
4. A new mine or mineral processing plant for any mineral subject to the net proceeds tax.

* The sections above apply only to taconite mines and plants, not to any other mine or plant.

Aggregate Material Sales and Use Tax (Minnesota Statute 297A)

Aggregate material is nonmetallic natural mineral aggregate including, but not limited to, sand; silica sand; gravel; stone; boulders; and crushed and uncrushed rock, including landscape rock, rip-rap, crushed granite and crushed limestone.

Industrial Production Exemption

Aggregate producers are allowed to make purchases exempt from sales or use tax if the purchases are used or consumed in the production of personal property intended to be sold ultimately at retail. This includes chemicals, fuels, petroleum products, lubricants, gas and electricity.

Capital Equipment Refund

New or used original or replacement capital equipment, repair, replacement and spare parts, accessories, special purpose buildings and foundations for capital equipment qualify for the capital equipment refund of the 6.5 percent sales tax paid.

Aggregate Materials Sales

Sales to Contractors

Taxable: Generally, sales tax does not apply when contractors make improvements to real property and purchases of aggregate by a contractor to make the improvement to real property are taxable. Generally, charges by third parties to deliver of aggregate are subject to the tax. If the person delivering aggregate materials has a contract requiring both the delivery and the depositing substantially in place of the aggregate materials, the transaction will be treated as an improvement to realty. The aggregate material will be considered to be deposited substantially in place if the aggregate material is deposited directly from the transporting vehicle or through spreaders from the transporting vehicle at the actual place where it will be graded or compacted. If the aggregate material is merely dumped in a pile, the delivery charges are subject to sales tax.

Nontaxable: The purchase of aggregate by a contractor from a pit owner for resale is exempt from sales tax if the contractor provides the pit owner with a completed exemption certificate, Form ST3. A retail sale by a contractor involves only the dumping of aggregate; no leveling, spreading, or further action by the contractor is provided. The contractor must charge sales tax to the end user of the aggregate. **Effective Jan. 1, 2002, all delivery charges are subject to sales tax.**

Sales to Townships

Purchases by townships of aggregate, machinery, equipment and accessories **used exclusively for road and bridge maintenance** are exempt from sales tax. Charges to deliver gravel to a township are also exempt. Purchases of aggregate, machinery, equipment and accessories used for parking lots, playgrounds, trails, etc., are subject to sales tax. Also, all culverts, bridge decking or railing, structural steel and any road surfaces, such as asphalt, concrete or chloride are subject to sales tax.

Sales to Cities, Counties or Special Taxing Districts

All sales of aggregate to cities, counties or special taxing districts are subject to sales tax when they are used by these entities, unless they will be resold in the same form. No exemption is allowed for purchases used for road and bridge maintenance.

Aggregate Pit Owned by a Government Unit

If a pit is owned or leased by a government unit, aggregate removed for its own use **is not subject to sales tax**. However, all aggregate sold to others is subject to sales tax, unless the purchaser provides an exemption certificate.

Aggregate Crushing and Screening

Screening and crushing of aggregate is fabrication labor subject to sales tax. Fabrication labor is the making or creating of a new product or altering an existing product into a new or changed product, even when the customer provides the materials to be screened or crushed.

Sales Tax on Purchases: Ready-Mix Concrete Producers

Nontaxable Purchases: The purchase of aggregate by a ready-mix concrete producer to be used in making the product is exempt from sales tax if the producer provides a completed exemption certificate (ST3) to the aggregate seller. Ready-mix concrete producers are not classified as contractors.

Nontaxable Purchases: If a ready-mix producer makes retail sales of aggregate, the aggregate may be purchased exempt from sales tax if they provide a completed exemption certificate (ST3) to the aggregate seller.

Sales Tax on Purchases: Bituminous Producers

Taxable Purchases: All purchases of aggregate are taxable if the bituminous producer is primarily a contractor (makes and installs the product).*

Exempt Purchases: If a bituminous producer is primarily a retailer and makes retail sales of bituminous product (does not include installation), the purchase of the aggregate is exempt from sales tax provided the retailer provides a completed resale exemption certificate (ST3) to the aggregate seller.

Note: If the bituminous producer is a contractor-retailer, it must decide which function constitutes at least 50 percent of the business. If the producer is primarily a contractor, it must pay sales tax on all purchases. If the producer is primarily a retailer, it may purchase aggregate exempt from sales tax if a completed exemption certificate (ST3) is provided to the aggregate seller.

* Purchases by a contractor while acting as a purchasing agent for exempt entities may be purchased without paying sales tax only if the contractor has a written agreement with the exempt entity. This written agreement must contain certain criteria. For more information regarding purchasing agreement criteria, contact the Department of Revenue.

Ad Valorem Tax on Auxiliary Mining Lands for Taconite Operations

(Minnesota Statute 272.01)

Lands and structures actively used for taconite production are exempt from the ad valorem tax and are subject to the production tax *in lieu* of property tax. Actively used lands include the plant site, mining pit, stockpiles, tailings pond and water reservoirs. Also included are lands stripped and ready for mining, but not lands merely cleared of trees. Exemptions are granted on a parcel basis to the nearest five acres. It is important to note that this exemption applies only to the ad valorem tax on the land and buildings and **not to the unmined taconite tax** described on the following page. Lands adjacent to these facilities, commonly referred to as auxiliary mining lands, are subject to assessment of ad valorem tax administered by the county.

The county assessor is responsible for estimating the market value of auxiliary mining lands and classifying them into one of several property classifications established by Minnesota law. The two most common property classifications used on auxiliary mining lands are industrial and timber. In general, lands in close proximity to active taconite operations are assigned the industrial classification while those further away are classified as timber. The classification of property is covered in M.S. 273.13.

Each property classification has a legislatively set percentage called the class rate that is multiplied by the assessor's estimated

market value (EMV) to calculate tax capacity. For payable 2007 taxes, the class rate for timber is 1.00 percent of the estimated market value. For the industrial classification, there are two class rates: 1.50 percent for the first \$150,000 of the EMV and 2.0 percent for the value over \$150,000.

Property taxes are calculated by multiplying a property's tax capacity times the tax extension rate for the jurisdiction where it is located. Tax extension rates are determined by county, local government and school district spending. In St. Louis County within the mining area for taxes payable in 2007, they range from a low of approximately 90 percent to a high of approximately 266 percent. In addition, the market value times the referendum rate must be added to the tax determined above if there is a referendum in the taxing district. For industrial class property, the state general tax rate of 48.032 percent applies in addition to the local tax rate.

The following schedule provides for adjustments in both the valuations and classifications of auxiliary mining lands located on the iron formation versus off-formation lands as well as further refinements based on the proximity of these lands to active mining operations. It outlines valuation adjustments to be made on excess lands where they are located as market conditions and/or Minnesota statutes dictate (see below). This schedule was updated based on market conditions for the 2007 assessment.

St. Louis County Mining Land Assessment Schedule

1. Iron formation land	Value (\$/acre)	Classification
A. Land within ¼ mile of active pit	\$1000	Industrial
B. Excess land (more than ¼ mile from mining activity or outside 15-year pit limit).		
1. Undisturbed	same as other private land	Timber or current use
2. Disturbed		
a. Stockpiles	75% of other private land	Timber or current use
b. Abandoned Pits	50% of other private land	Timber or current use
2. Off-formation land		
A. Land within ¼ mile of mining activity	\$700	Industrial
B. Excess Land		
1. Undisturbed	Same as other private land	Timber or current use
2. Tailings Ponds		
a. Stockpiles	75% of other private land	Timber or current use
b. Tailings Ponds	30% of other private land	Timber or current use

Ad Valorem Tax on Unmined Taconite

(Minnesota Statute 298.26)

A tax not exceeding \$15 per acre may be assessed on the taconite or iron sulfides in any 40-acre tract from which the production of iron ore concentrate is less than 1,000 tons.

The heading in the statute is somewhat misleading since it refers to a *Tax on Unmined Iron Ore or Iron Sulfides*. The tax clearly applies to unmined taconite and has been administered in that manner. The term “iron ore” does not refer to high-grade natural ore in this instance.

The tax, as presently administered, applies to all iron formation lands on the Mesabi Range. The statutory exemption administered by the county assessor provides that in any year in which at least 1,000 tons of iron ore concentrates are produced from a 40-acre tract or government lot, the tract or lot are exempt from the unmined taconite tax. The county assessors have also exempted actual platted townships that are occupied.

The iron formation lands on the Mesabi Range are divided into two categories by the Minnesota Department of Revenue. This is done through the evaluation of exploration drill hole data submitted by the mining companies.

The categories are:

- 1) *Lands that are underlain by magnetic taconite of sufficient quantity and grade to be currently economic:* They are considered to be *economic* taconite and are given a market value of \$500 per acre.
- 2) *Lands either not believed or not known to be underlain by magnetic taconite of current economic quantity, quality and grade:* They are considered to be *uneconomic* taconite and are given a market value of \$25 per acre.

To be classified as economic taconite, category 1, the taconite must pass the following criteria:

- contain more than 16 percent magnetic iron with the Davis tube test;
- contain less than 10 percent concentrate silica (SiO₂) with the Davis tube test;
- have a 15- to 25-foot minimum mining thickness; and
- have a stripping ratio of less than four-to-one (waste/concentrate), calculated as follows:

$$A) \text{ Surface (ft.)} \times 1.5 = \frac{\text{Equiv. Ft.}}{\text{Surface}}$$

$$B) \text{ Rock (ft.)} \times 2.25 = \frac{\text{Equiv. Ft.}}{\text{Waste}}$$

$$C) \frac{\text{Ore (ft.)} \times 2.5}{3} = \frac{\text{Equiv. Ft.}}{\text{Concentrate}}$$

$$\text{Stripping Ratio} = \frac{A + B}{C}$$

If the material fails any of the above criteria, then it is considered to be *uneconomic* taconite and classified as category 2. Some lands may also be considered as uneconomic due to environmental restrictions.

For taxes payable in 2007, the tax is calculated by multiplying the market value for the parcel of land by the 2.00 percent class rate to obtain the tax capacity. The special rate on the first \$150,000 of market value that applies to class 3 commercial/industrial property does not apply to class 5 unmined taconite. This is then multiplied by the local tax rate plus the state general property tax rate of 48.032 percent for taxes payable in 2007. In addition, if a referendum is present, the referendum rate is multiplied by the full market value (not tax capacity). *Note: call your county auditor for more information.*

Figure 35

Unmined Taconite Tax Paid

(Year payable)

County	2000	2001	2002	2003	2004	2005	2006	2007
Itasca	\$ 0	\$ 0	\$ 0	\$ 0	\$ 0	\$ 0	\$ 0	\$ 0
St. Louis	401,764	397,428	316,140	317,033	300,173	273,601	261,687	532,102
Totals	\$401,764	\$397,428	\$316,140	\$317,033	\$300,173	\$273,601	\$261,687	\$532,102

Ad Valorem Tax on Unmined Natural Iron Ore

(Minnesota Statutes 272.03, 273.02, 273.12, 273.13, 273.165, 273.1104)

Since 1909, Minnesota's natural iron ore reserves have been estimated and assessed by the state for ad valorem tax purposes. The actual ad valorem tax levy is set by the county, the school district and the local township or municipality. The county auditor collects the tax levy.

A Minnesota Supreme Court decision in 1936 established the present worth of future profits method for valuing the iron ore reserves. This is accomplished through the use of a complex formula known as the Hoskold Formula. The formula takes into account ore prices and all the various cost factors in determining the value of the unmined ore.

Each year, the Minnesota Department of Revenue uses a five-year average for allowable costs taken from the occupation tax report. A five-year average of the Lake Erie iron ore market value is also used. These averages are used to help reduce fluctuation of value due to sudden cost/price changes.

The following expenses are allowed as deductions from the Lake Erie market value on the computation of present worth, which is known as the Hoskold Formula:

- | | |
|--|---|
| 1a. Mining, normal costs | 6. Freight and marine insurance |
| 1b. Mining, special costs | 7. Marketing expense |
| 2. Beneficiation | 8. Social Security tax* |
| 3. Miscellaneous (property tax, medical ins., etc. | 9. Ad valorem tax (by formula) |
| 4. Development (future) | 10. Occupation tax |
| 5. Plant and equipment (future)
Plant | 11. Federal income tax |
| | 12. Interest on development and working capital |

* Since 1987, Social Security tax has been included under miscellaneous.

These twelve allowable expense items are deducted from the Lake Erie market value to give the estimated future income (per ton). Note that although royalty is allowable as an occupation tax deduction, it is not allowable on Minnesota's ad valorem tax.

The present worth is then determined by multiplying the estimated future income (per ton) by the Hoskold Factor. The department presently allows a 12 percent risk rate and 6 percent safe rate that yields the .33971 Hoskold factor when used with a 20-year life. A 20-year life has been used since 1968 as representative of the remaining life of Minnesota's natural iron ore reserves. The resulting value is considered the market value by the Minnesota Department of Revenue.

The term "class rate" was introduced for taxes payable in 1990. For 2002 and thereafter, this rate is reduced to 2.0 percent.

The tax capacity is the product of the class rate and the market value. The product of the market value and class rate must then be multiplied by the local tax rate plus the state general property tax rate to determine the tax. In addition, the market value times the referendum rate must be added if there is a referendum in the taxing district.

Local tax rates are a function of county, local government, and school district spending. In addition, a statewide general property tax levy applies to most types of property with the exception of agricultural and homestead properties. For example, for taxes payable in 2007, tax rates ranged from a low of approximately 90 percent to a high of approximately 266 percent (not including the state general property tax rate of 48.032 percent) in St. Louis County. The following class rates were in effect through 2007:

CLASS RATES

Payable 1995	4.60%
Payable 1996	4.60%
Payable 1997	4.60%
Payable 1998	4.00%
Payable 1999	3.50%
Payable 2000	3.40%
Payable 2001	3.40%
Payable 2002	2.00%
Payable 2003	2.00%
Payable 2004	2.00%
Payable 2005	2.00%
Payable 2006	2.00%
Payable 2007	2.00%
Payable 2008	2.00%

The special rate on the first \$150,000 of market value that applies to class 3 commercial/industrial property does not apply to unmined iron ore that are class 5 properties.

The Minnesota Department of Revenue has tried to maintain all ores on the tax rolls, including the uneconomic, underground and unavailable classifications. A schedule of minimum rates was established in 1963 and revised in 1974, 1986, 1988, 1992 and 1999. The market values for iron ores that do not show a value with the Hoskold Formula are determined from the schedule of minimum rates. The table on the following page lists the current schedule of minimum rates. Most of the iron ore value remaining today was determined using the schedule of minimum rates.

Figure 36

Minimum Rates		
Ore classification	Market value/ton (cents)	
	Itasca and St. Louis Counties	Crow Wing County
Wash Ore Concentrate (OPC)	12.0	6.0
Heavy Media Concentrate (HMC)	9.0	4.5
Low Grade (OPPRC)	3.0	1.5
Underground uneconomic (Stripping ratio greater than 5 to 1)		
Underground Concentrate > 60% Fe (UGC)	2.4	1.2
Underground Concentrate < 60% Fe (UGC)	1.8	0.9
Underground Heavy Media (UGHM)	1.5	0.75
Low grade (UGPRC)	0.9	0.45
Low grade (UGR)	0.9	0.45

Open pit ores with too high of a cost to show a value with the Hoskold Formula are assigned minimum values from the open pit classification. Underground and uneconomic ores with stripping ratios exceeding five-to-one are assigned minimum values from underground uneconomic classification.

Beginning with the 1999 assessment, the minimum rates for determining market values in Crow Wing County were reduced by 50 percent. This simply recognizes that the potential for mining iron ore is substantially less in Crow Wing County than on the Mesabi Range in St. Louis or Itasca counties.

Figure 37

Iron Ore Ad Valorem Tax Payable						
Year assessed	Market value	Payable	Year estimated tax payable			Total
			Crow Wing	Itasca	St. Louis	
1992	5,785,900	1993	19,600	46,000	276,300	341,900
1993	5,476,900	1994	20,900	47,400	254,600	322,900
1994	5,071,600	1995	14,000	34,800	262,400	311,200
1995	4,823,000	1996	12,100	32,600	237,600	282,300
1996	4,448,800	1997	10,900	34,900	226,200	272,000
1997	4,175,400	1998	10,400	23,500	244,900	278,800
1998	4,020,900	1999	8,200	18,900	188,100	215,200
1999	3,781,800	2000	4,200	20,200	181,800	206,200
2000	3,765,800	2001	3,900	18,600	159,400	181,900
2001	3,637,400	2002	3,500	17,600	147,200	168,300
2002	2,720,400	2003	3,500	16,900	107,200	127,600
2003	2,734,200	2004	3,300	15,400	101,600	120,300
2004	2,529,200	2005	2,700	14,100	87,300	104,100
2005	2,355,700	2006	2,700	13,300	77,400	93,400
2006	2,350,100	2007	2,500	12,700	79,100	94,300
2007	2,255,300	2008				

A notice of the market value of unmined ore shall be sent to each person subject to the tax and to each taxing district affected on or before May 1st (M.S. 273.1104).

According to the provisions of M.S. 273.1104, a public hearing to review the valuations of unmined iron ore must be held on the first secular day following May 20. This hearing provides an opportunity for mining company and taxing district representatives to formally protest any of the ore estimates or valuation procedures they believe to be incorrect.

In addition, current conditions and future trends in the iron ore industry are discussed. Iron ore ad valorem taxes are expected to continue their long decline as remaining economic deposits are mined or allowed to go tax forfeit. Reserves in old flooded pits converted to recreational use are classified as underground, low-grade recreational (UGR).

Ad Valorem Tax on Taconite Railroads

(Minnesota Statute 270.80 - 270.88)

Beginning with the Jan. 2, 1989 assessment, taconite railroads have been included in the definitions of *common carrier* railroads and were assessed and taxed on an ad valorem basis according to Minnesota law. LTV and Northshore were the only railroads classified as taconite railroads. Since the 2003 assessment Northshore Mining is the only operating railroad.

The Minnesota Department of Revenue developed rules governing the valuation of railroad operating property. The rules have been in effect since 1979 when common carrier railroads went off the gross earnings tax. Each railroad is required to file an annual report containing the necessary information.

The valuation process utilizes the unit value concept of appraisal. For taconite railroads, this involves calculating a

weighted cost indicator of value allowing for depreciation and obsolescence. Personal property is then deducted from the net cost indicator to yield a Minnesota taxable value.

This value is then *apportioned* to the various taxing districts where the taconite railroad owns property. The amount of value each taxing district receives is based on an apportionment formula involving three factors: land, miles of track and the cost of buildings over \$10,000.

After the market value is apportioned to each taxing district, the value is equalized with the other commercial and industrial property on a county-wide basis using an estimated median commercial and industrial sales ratio. A commercial and industrial ratio is developed for each county and applied to that county's taconite railroad market values.

Figure 38

Taconite Railroad Ad Valorem Tax Assessed

Ad Valorem Tax on Severed Mineral Interest

(Minnesota Statutes 272.039, 272.04, 273.165)

Definition

Severed mineral interests are those separately owned from the title to surface interests in real estate. Severed mineral interests are taxed under Minnesota law at 40 cents per acre per year times the fractional interest owned. The minimum tax on any mineral interest (usually 40-acre tracts or government lots) regardless of the fractional interest owned, is \$3.20 per tract. No tax is due on mineral interests taxed under other laws relating to the taxation of minerals, such as unmined taconite or iron ore, or mineral interests exempt from taxation under constitutional or related statutory provisions.

Ownership of a specific mineral or group of minerals, such as energy minerals or precious metals rather than an actual *fractional interest* of all the minerals, does not constitute a fractional interest. Thus, if one individual reserved all minerals except gas, oil and hydrocarbons, and a second entity reserved the hydrocarbons, each owner would be subject to the full 40 cents per acre tax.

The severed mineral tax is a property tax that is levied by local taxing authorities in the same manner as other local property taxes. Proceeds from the tax are distributed in this manner: 80 percent is returned by the county to local taxing districts where the property is located in the same proportion that the local tax rate of each taxing district bears to the total surface tax rate in the area; and 20 percent to the Indian Business Loan Account in the state treasury for business loans made to Indians by the Department of Employment and Economic Development.

The Registration and taxation of severed mineral interests is a county function. Severed mineral interests are registered with the county recorder in the county where the interest is located. The county auditor sends a tax statement similar to any other real estate interest. The tax is normally collected in two increments payable in May and October. If the tax is less than \$50, the taxpayer is required to pay in full with the May payment.

Nonpayment Penalty: Forfeiture

The eventual penalty for not paying the tax is forfeiture. Policies vary somewhat among counties. Specific questions about the tax, interest or penalties should be directed to the county recorder and auditor in the county where the minerals are located.

Tax Imposed

The tax on severed mineral interests was enacted in 1973 as part of an act that required owners to file a document with the county recorder where the interests were located describing the mineral interest and asserting an ownership claim to the minerals. The purpose of this requirement was to *identify and clarify the obscure and divided ownership conditions of severed mineral interests in this state* (M.S. 93.52). Failure to record severed mineral interests within time limits established by the law results in forfeiture to the state (M.S. 93.55).

History of Litigation

In 1979, the Minnesota Supreme Court ruled that the tax, the recording requirements and the penalty of forfeiture for failing to timely record were constitutional, but also ruled that forfeiture procedures were unconstitutional for lack of sufficient notice and opportunity for hearing. This decision is cited as *Contos, Burlington Northern, Inc. U.S. Steel, et al. v. Herbst, Commissioner of Natural Resources, Korda, St. Louis County Auditor, Roemer, Commissioner of Revenue, and the Minnesota Chippewa Tribe, et al.*, 278 N.W. 2d 732 (1979). The U.S. Supreme Court refused to hear an appeal requested by the plaintiffs. Shortly after this decision, the legislature amended the law to require notice to the last owner of record and a court hearing before a forfeiture for failure to timely record becomes complete. Under these requirements, court orders have been obtained by the state in several counties declaring the forfeiture of particular severed mineral interests to be complete and giving title to the state.

Figure 39

Tax Collection and Distribution

Period ending	80% retained by local government	20% payment to Indian Business Loan Account	Total collections of affected counties
Dec. 31, 1998	470,472	117,618	588,090
Dec. 31, 1999	606,560	151,640	758,200
Dec. 31, 2000	468,068	117,017	585,085
Dec. 31, 2001	201,952	50,488	252,440
Dec. 31, 2002	707,716	176,929	884,645
Dec. 31, 2003	461,456	115,364	576,820
Dec. 31, 2004	342,468	85,617	428,085
Dec. 31, 2005	542,524	135,631	678,155
Dec. 31, 2006	341,884	85,471	427,355

In 1988, the legislature amended the law to allow the commissioner of the Minnesota Department of Natural Resources to lease unregistered severed mineral interests before entry of the court order determining the forfeiture to be complete. However, mining may not commence under such a lease until the court determines that the forfeiture is complete.

In a 1983 case, the Minnesota Supreme Court ruled that severed mineral interests owned by the Federal Land Bank of St. Paul were exempt from the state severed mineral tax under a federal law exempting Land Bank real estate from local property taxes. The U.S. Supreme Court denied a petition by the State of Minnesota to review the case.

DNR Lease

If someone buys a DNR mining lease of 3 or more years duration, the severed mineral interest tax of 40 cents per acre applies. More detail is available on page 51 (5th paragraph) under Ad Valorem Tax.

Indian Business Loan Account

The 20 percent portion of the severed mineral interest tax that is allocated to the Indian Loan Program is reported by the county auditors on the *Severed Mineral Interest Return*. Normally, the form is submitted twice each year to correspond with payment of property taxes.

The money deposited in the severed mineral interest account is distributed to the Indian Loan Program at the end of each month.

A copy of the *Severed Mineral Interest Return* form is below:

Figure 40

MINNESOTA • REVENUE

SEVERED MINERAL INTEREST RETURN

County: _____ Minnesota tax ID: _____

Contact person: _____ Daytime phone: _____

Year: _____

Period (Circle One): January to June July to December

You must file this return each quarter to report Minnesota’s share of the fee you collect. **Returns are due on or before the 20 day of the following month.** You must pay the amount you owe by check. If you have any questions, call 651-556-4721 or Minnesota Relay (TTY) 711.

Severed Mineral Interest

- Total Severed Mineral Interest collected 1. _____
- Multiply line 1 by 80% (.80) 2. _____
- Subtract line 2 from line 1. **This is the state’s share of the tax** 3. _____

Mail to: Minnesota Revenue, Mail Station 3331, St. Paul, MN 55146-3331.
Send your payment with this return.

Department of Revenue

The processing and payment of the severed mineral interest tax is handled by the Special Taxes Division of the Minnesota Department of Revenue. Phone: (651) 556-4721.

Loan Program

The Indian Business Loan Program is administered by the Department of Employment and Economic Development, 500 Metro Square, 121 7th Place East, St. Paul, MN 55101. Phone: (651) 297-1170.

Taxes on Other Mining and /or Exploration

This section will identify and explain the taxes that apply to the exploration and/or mining of materials other than iron ore. *Figure 41* identifies each tax by statute number and references each of them in this publication.

<p>Base Metals</p> <p>Copper, Nickel, Lead, Zinc, Titanium</p>	<p>Precious Metals</p> <p>Gold, Silver, Platinum Group</p>	<p>Energy Minerals</p> <p>Coal, Oil, Gas, Uranium</p>

Figure 41

Index of Other Mining/Exploration Taxes

Tax	Current laws	Mining Tax Guide Page No.
Ad valorem tax (smelter and plant facilities only)	M.S. 272 and 273	Page 51
Net Proceeds tax	M.S. 298.015-298.018 — 2%	Page 52
Occupation tax	M.S. 298.01 — 2.45%	Pages 28 and 53
Sales and Use tax	M.S. 297A — 6.5%	Pages 40 and 53
Severed Mineral Interest	M.S. 272.039, 272.04, 273.165	Page 49
Withholding tax on royalty payments	M.S. 290.923 — 6.25%	Pages 37 and 53

Ad Valorem Tax (M.S. 272-273)

The 1991 legislature amended the definition of real property in M.S. 272.03, Subd. 1, (c)(i), to specifically *exclude* mine shafts, tunnels, and other underground openings used to extract ores and minerals taxed under Chapter 298. The tax on ore reserves, other than taconite and iron ore, was specifically removed in 1987, M.S. 273.12, 1987, c. 268, art. 957. The exemption was further clarified by 2005 legislature in M.S. 272.02, Subd. 73, Par. (b). Companies mining any of the minerals listed are subject to property tax like other businesses, such as taxation of land and building values.

Machinery such as pumps, motors, grinding mills, etc., is considered personal property and *not subject to ad valorem tax*. In 2005 the St. Louis County assessor indicated that new large buildings were typically valued at \$26 to \$32 per square foot for ad valorem tax purposes. Storage buildings could be assessed as low as \$10 or \$14 per square foot. Tax rates are set by the county, local communities and school districts according to state law, and the tax is administered and collected by the county. There is also a statewide property tax levy set by the legislature which applies to commercial-industrial and some other types of property.

Minnesota's property taxes are computed as follows:

For commercial and industrial property, the assessor's estimated market value is multiplied by a class rate to obtain gross tax capacity. *See class rate chart*. The first \$150,000 of value is 1.5 percent while a 2 percent rate applies over \$150,000. To determine the tax, the product of the market value and class rate must be multiplied by the local tax rate plus the 48.032 percent state general property tax rate for taxes payable in 2007. In St. Louis County, where the majority of Minnesota's mining industry is located, the local tax rates payable in 2007 varied from a low

A list of recent rates follows:

	CLASS RATES	
	Over \$150,000	First \$150,000
Payable 1998	4.00%	2.70%
Payable 2000	3.40%	2.40%
Payable 2002	2.00%	1.50%
Payable 2004	2.00%	1.50%
Payable 2005	2.00%	1.50%
Payable 2006	2.00%	1.50%
Payable 2007	2.00%	1.50%

of 90 percent to a high of approximately 266 percent. If a referendum tax is passed, the referendum rate times the full market value must be added.

Special policies issued by the Minnesota Department of Natural Resources (DNR) apply to metallic mineral leases (Minn. Rules, parts 6125.0100 - .0700). The Commissioner of Revenue has advised all county auditors and assessors that leases issued by the DNR constitute a taxable interest in real estate (M.S. 272.01, Subd. 2[a] and [b]). The taxes are to be assessed and collected as personal property taxes and do not become a lien against the real property. The commissioner further advised that when activities under the leases during the initial years are limited to **exploration**, the tax should not exceed the severed minerals interest tax. For all taxes levied in 1994 and thereafter, the tax should not exceed 40 cents per acre while the lease activities constitute exploration. Specific leases may vary, but the tax is to be determined based on the number of acres made available to the lessee and the fractional interest, if any, that is leased.

Contact the DNR, Minerals Division, to determine the status of activities under any state metallic minerals lease.

Net Proceeds Tax (M.S. 298.015-298.018)

A tax equal to 2 percent of the net proceeds from mining in Minnesota applies to all mineral and energy resources except sand, silica sand, gravel, building stone, all clays, crushed rock, limestone, granite, dimension stone, horticultural peat, soil, iron ore and taconite. Net proceeds are the gross proceeds from mining less allowable deductions. The net proceeds tax has been in effect since 1987 and is due on June 15 of the year succeeding the calendar year of the report.

Additional information is available from the Minnesota Department of Revenue, Minerals Tax Office, Eveleth.

Gross Proceeds

- 1) If the minerals are sold in an arms-length transaction, the gross proceeds are the proceeds from the sale.
- 2) If the minerals are used by the taxpayer or disposed of in a non-arms-length transaction, such as shipments to a wholly-owned smelter or transactions between affiliated companies, the gross proceeds are determined as follows:
 - a) Prices are determined using the average annual price in the *Engineering and Mining Journal*. If there is no average annual price for the mineral, then an arithmetic average of the monthly or weekly prices published in the *Engineering and Mining Journal* is used. For minerals not listed in the *Journal*, another recognized published price as determined by the Commissioner of Revenue will be used; and
 - b) the price as determined above is multiplied by the amount of the mineral credited or paid by the smelter. Any special smelter charges included in this price are deducted. The resulting amounts are the gross proceeds for tax calculation.

Net Proceeds

The net proceeds tax was designed to apply to mining and beneficiation, generally to the point of a saleable product. In the case of some hydrometallurgical processes, the saleable product may be a refined metal.

Net proceeds are gross proceeds less certain deductions. Not all expenses, however, are allowed as deductions. The following is a comprehensive list of unallowable deductions and allowable deductions:

Unallowable Deductions Include:

- sales, marketing, and interest expense;
- insurance and tax expense not specifically allowed;
- administrative expense outside Minnesota;
- research expense prior to production;
- reserve for reclamation costs after production ends; and
- royalty expense, depletion allowances, and the cost of mining land.

Allowable Deductions

Certain ordinary and necessary expenses actually paid for mining, production, processing, beneficiation, smelting or refining are allowed as deductions:

- labor, including wages, salaries, fringe benefits, unemployment and Workers' Compensation insurance;
- operating equipment and supplies, including sales and use tax paid. Cost of machinery, equipment, and supplies of a capital nature is deductible as depreciation expense only, per Section 167 of the Internal Revenue Code;
- transportation of minerals, if the expense is included in the sales price;
- administrative expense inside Minnesota;
- exploration, research, or development expense in Minnesota is deductible in the year paid;
- exploration and development expense in Minnesota incurred prior to production must be capitalized and deducted on a straight-line basis over the first five years of production; and
- reclamation costs paid in a year of production.

The carryback or carryforward of deductions is not allowed.

Distribution

The net proceeds tax on minerals and energy resources mined or extracted within the taconite assistance area must be distributed according to the formula provided by M.S. 298.018. Tax paid on minerals and energy resources mined outside the taconite assistance area is deposited in the state general fund. A summary of M.S. 298.018 distribution is listed:

- (1) 5 percent to the city or town where the minerals are mined or extracted
 - (2) 10 percent to the Municipal Aid Account
 - (3) 10 percent to the school district where mining or extraction occurred
 - (4) 20 percent to the Regular School Fund (13.72 cents)
 - (5) 20 percent to the county where mining or extraction occurred
 - (6) 20 percent to Taconite Property Tax Relief, using St. Louis County as fiscal agent
 - (7) 5 percent to the IRRRB
 - (8) Five percent to the Douglas J. Johnson Economic Protection Trust Fund
 - (9) 5 percent to the Taconite Environmental Protection Fund
- The proceeds must be distributed on July 15.

Economic Development Incentives

Various grants and loans have been available in the past for mineral development projects, although budget considerations in 2003 and 2004 have reduced the number available. Anyone contemplating a new operation should consult with the IRR.

Occupation Tax-Corporate Income Tax (M.S. 298.01)

All mining companies, ferrous or non-ferrous, are subject to the Minnesota Occupation tax. Please refer to page 28 for a general overview of recent changes to the occupation tax on taconite and iron ore.

Although gross income for tax is calculated differently for non-ferrous minerals, the sections “Changes in Apportionment” and “Occupation Tax Return” apply to all mining. Also note that the alternative minimum tax was repealed for mining after December 31, 2005.

For more information about the occupation tax, contact the Minnesota Department of Revenue, Minerals Tax Office, Eveleth.

Withholding Tax on Royalty (M.S. 290.923)

Beginning Jan. 1, 2001, all persons or companies paying royalties are required to withhold Minnesota income tax from royalty payments (6.25 percent) and remit the withholding tax and applicable information to the Minnesota Department of Revenue. See the section on *Income Tax Withholding on Mining and Exploration Royalty*, page 37.

Sales and Use Tax (M.S. 297A)

All firms involved in the mining or processing of minerals are subject to the 6.5 percent sales and use tax on all purchases, except those qualifying for the industrial production exemption. This exemption covers items that are used or consumed in the production of *tangible* personal property to be ultimately sold at retail. Classification of items included in this exemption are chemicals, fuels, petroleum products, lubricants, packing materials, electricity, gas and steam. Explosives, a major expense for mining, are exempt under the chemical classifications. Any new mining and/or processing facility would qualify for a refund of the 6.5 percent sales or use tax paid on capital equipment used to manufacture, fabricate, mine or refine tangible personal property ultimately sold at retail. For more information, see page 40 and contact the Minnesota Department of Revenue, Minerals Tax Office, Eveleth.

The specific exemption of mill liners applies only to the taconite industry. Purchases of liners or lining materials by other mining operations would be subject to sale and use tax unless they qualify for the industrial production exemption.

Figure 42

Glossary of Terms

Acid pellets — Taconite pellets comprised of iron, oxygen and silica held together by a binder such as bentonite (clay) or peridor (organic).

Agglomeration — The term describing the preparation and heat treatment used to prepare iron ore pellets or other iron ore products for shipment and use in a blast furnace.

Arms-length transaction — A sale of iron ore or pellets representing a true free market transaction when the buyer normally does not have an ownership or other special relationship with the seller.

BOF — Basic oxygen furnace — A steel-making furnace invented in Austria. It began to replace open hearth furnaces in the 1960s. It is currently the standard furnace used by the integrated steel producers in the United States.

Beneficiation — The process of improving the grade by removing impurities through concentrating or other preparation for smelting, such as drying, gravity, flotation or magnetic separation. In taconite operations, this includes the first stage of magnetic separation and converting the concentrate into taconite pellets for use in making steel.

Concentrate — The finely ground iron-bearing particles that remain after separation from silica and other impurities.

DRI — Direct reduced iron — A relatively pure form of iron (usually 90 percent + Fe), which is produced by heating iron ore in a furnace or kiln with a reducing agent such as certain gases or coal.

Dry weight — The weight of iron ore or pellets excluding moisture. For pellets, the dry weight is normally 1 to 2 percent less than the natural weight.

EF, EAF — Electric Arc Furnace — A furnace in which an electric current is passed through the charge. These furnaces are much smaller than the conventional BOFs used by the integrated steel producers.

Economic Protection Fund — Often referred to as the 2002 Fund—A portion of taconite production tax revenues is allocated to this fund with the idea that it would be used after the year 2002 to diversify and stabilize the long-range economy of the Iron Range.

Fe unit — Commonly referred to as an iron unit. An iron unit is a term of measurement denoting one ton containing 1 percent iron. Iron ore and taconite produced in the United States is measured in long tons (see definition). One long ton of taconite containing 65 percent iron also contains 65 *long ton* iron units.

Historically, this measurement was and is used for the selling price quoted in cents per iron unit. One example is a currently published price of acid pellets FOB mine at 37.344 cents per dry gross ton iron unit *or* \$.37344 per iron unit.

Fiduciary — An individual or organization holding something in trust for another. Sales tax collection, for example, establishes a fiduciary relationship between the collector and the State of Minnesota.

Flux pellets — Taconite pellets containing limestone or another basic flux additive. Flux pellets eliminate the need to add limestone in the blast furnace, improving productivity and quality. Adding flux reduces the iron content of a pellet. Flux pellets, as used in this guide, mean pellets containing 2 percent or more limestone or other flux.

Partial flux pellets — Flux pellets containing 1.99 percent or less limestone or other flux additive.

Gross National Product Implicit Price Deflator (GNPIP) — An index maintained by the U.S. Department of Commerce measuring inflation in the overall economy. The taconite production tax rate is adjusted annually based on the change in this index.

Integrated steel producer — Term used to describe older steel companies that produce steel by starting with raw iron ore, reducing it to molten iron in a blast furnace, and producing steel with a BOF, open hearth, or electric furnace.

Lake Erie value — The traditional and quoted price of iron ore from the earliest days of iron ore mining in Minnesota and Michigan. This price per iron unit included delivery, mainly rail and lake transportation, from the mine to a Lake Erie port.

This was the starting point for occupation tax since its 1921 beginning. It was the standard method of pricing domestic iron ore and taconite for occupation tax until the mid-1980s (see Mine Value).

Long ton — The standard unit of weighing for iron ore and taconite in the United States. A long ton is 2,240 pounds.

M.S. 298.225 — A Minnesota statute (law) guaranteeing the taconite production tax aids received by municipalities, counties, schools and the IRR. The aid levels are adjusted according to a sliding scale based on production levels.

Metric ton — Standard unit for weighing iron ore and taconite in most areas of the world. A metric ton equals 1,000 kilograms or 2,204.6 pounds.

Mine value — The value of iron or pellets at the mine. This became the starting point for occupation tax in 1987. This value per iron unit *does not* include any rail or lake transportation beyond the mine.

Mini mill — A small steel mill using an electric furnace that produces steel from scrap iron.

Natural ore — Iron ore that can be fed to a blast furnace with less complicated processing than taconite requires. Natural ore typically contains 50 percent +Fe (iron) in its natural state.

Natural weight — The weight of iron ore or pellets including moisture.

Net proceeds tax — A tax equal to 2 percent of net proceeds from mining. Net proceeds are determined by subtracting certain basic deductions such as labor, equipment, supplies and depreciation from gross proceeds or sales.

Non-equity sales — See Arms-length transaction.

Open hearth — An obsolete steel making furnace still used in some Eastern European and Third World countries. No open hearth furnaces are presently operating in the United States.

Pellet chip — Broken pellets often cannot be sold as pellets and instead are sold at a reduced price for sinter plants and other uses. For occupation tax purposes, chips are defined as *individual shipments or stockpiles containing at least 85 percent of pellet chips smaller than one-fourth inch*. Such chips cannot be shipped or commingled with regular pellets.

For occupation tax purposes, pellet chips are valued at 75 percent of the value of the unbroken pellets.

Percentage depletion — A taxable income *deduction* representing a return on capital investment on a *wasting* asset subject to a gradual reduction in reserves. This deduction applies to income derived from various mining or oil and gas properties. For iron ore, the *deduction* is a flat percentage of 15 percent of income from the iron ore only mined on a specific property. This deduction, however, cannot exceed 50 percent of taxable income from the property computed without the depletion deduction.

Range Association of Municipalities and Schools (RAMS) — An association representing all Iron Range cities, towns and schools receiving any funding from the taconite production tax. An office is maintained in Buhl, Minn.

Region 3 — Koochiching, Itasca, Aitkin, Carlton, St. Louis, Lake and Cook counties.

Royalty — Any amount (money or value of property) received for granting permission to explore, mine, take out or remove ore.

Short ton — Standard for weighing many commodities in the United States. It equals 2,000 pounds.

Steel Mill Products Index (SMPI) — A United States government index tracking the actual selling price of all steel products in the United States. This index is published monthly by the U.S. Department of Labor. It is part of the formula used to determine a mine value for occupation tax purposes each year.

Taconite — Taconite is defined in Minnesota statutes as ferruginous chert or ferruginous slate in the form of compact, siliceous rock in which the iron oxide is so finely disseminated that substantially all of the iron-bearing particles are smaller than 20 mesh.

It is not merchantable in its natural state, and it cannot be made merchantable by simple methods of beneficiation involving only crushing, jigging, washing and drying.

Tailing — Small rock particles containing little or no iron, which are separated during various stages of crushing, grinding, and concentration. Most of the separation is done with magnetic separators. Silica is the main mineral constituent of tailings.

Taxable tons — The *three-year average* of the current and prior two years production. The taconite production tax is based on taxable tons. The weight is on a dry basis without any flux additives.

Index Map - Minnesota Mesabi Map Set

This index map indicates the 35 quadrangles included in the Minnesota Mesabi Map Set. Eveleth, Gilbert, Kinney, McKinley and Virginia have been updated to Jan. 1, 1994. Tower and Soudan are available as supplementary maps and are current to Jan. 1, 1994. Ely was available as of Jan. 1, 1996.

These maps show the status of the taconite mining industry, as well as major highways, railroads, powerlines, pipelines, recreation areas, municipal and school district boundaries.

Updates of Aurora, Hibbing, Keewatin, Allen, Babbitt N.E. were completed by Jan. 1, 1996.

The original atlas with cover (less the six Ely quadrangles but including the 1995 and 1996 updates), is available for \$200 plus sales tax and shipping and handling.

Individual maps are \$5.00 each plus sales tax.

Please make checks payable to the Mesabi Map Project.

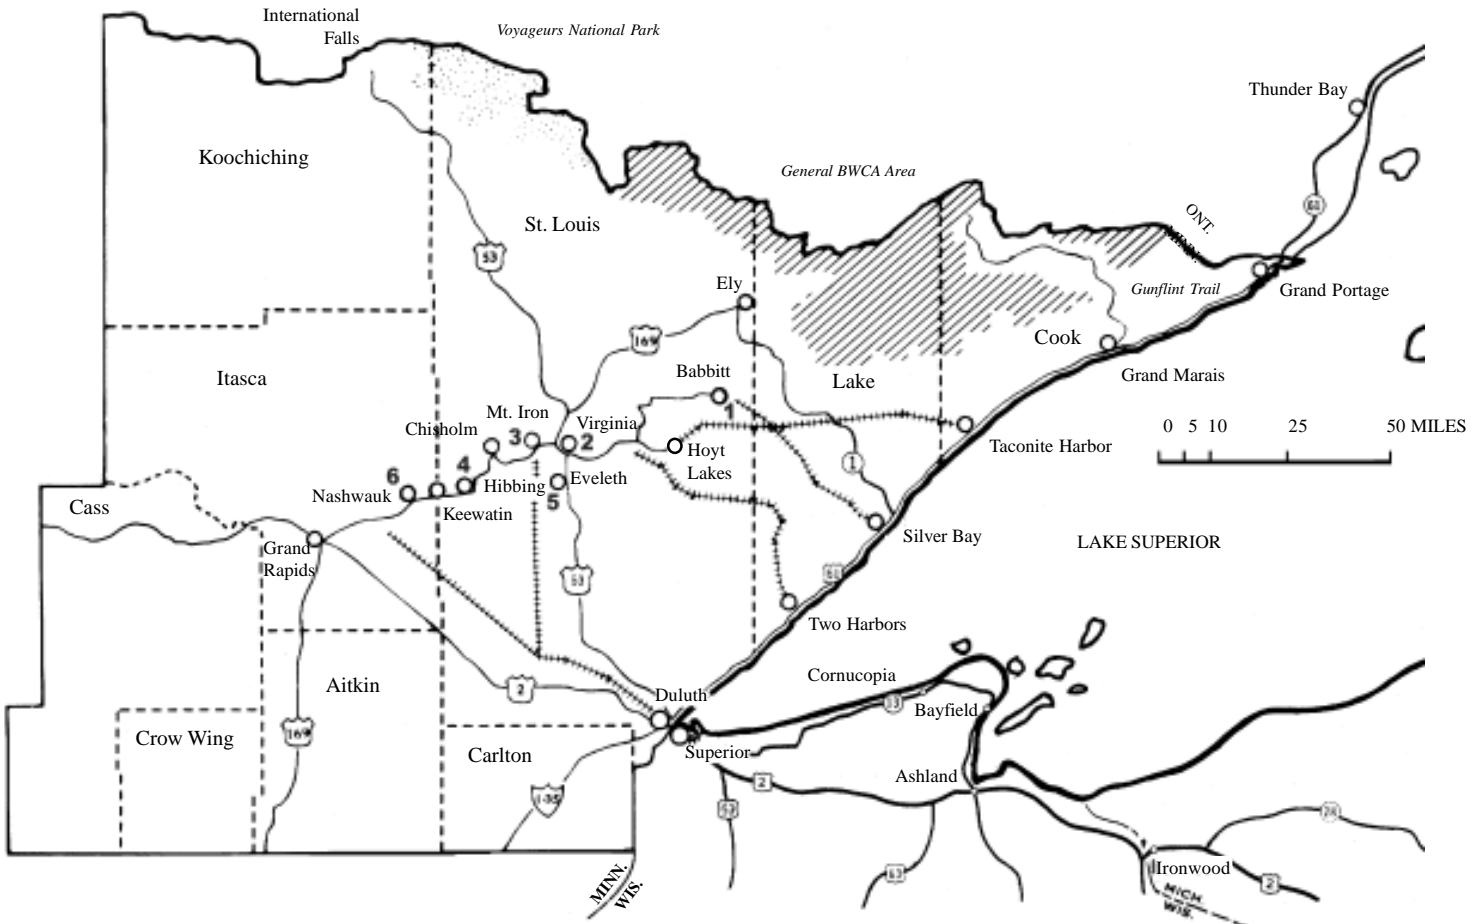

Shipping and Handling: Map Atlas Set - \$9.00

Individual Maps - \$3.50 for first map + .25 cents for each additional map up to 9 maps (First Class Mail).

Orders can be placed with the Minnesota Department of Revenue, Minerals Tax Office, 612 Pierce Street, Eveleth, MN 55734. Phone (218) 744-7424, Fax (218) 744-7421.

Map of Northeastern Minnesota

Taconite Company Locations Ownership and General Information

	Effective Capacity* —(million tons)		Effective Capacity* (million tons)
1. NORTHSHORE MINING COMPANY Owner: Cliffs Mining Company (100%) Cleveland, Ohio	4.7	5. United Taconite Company LLC Cliffs Mining Company, Managing Agent Owners: Cliffs Minnesota Mining Company (70%) Cleveland, Ohio	4.3
2. MINORCA PLANT Owner: Mittal Steel USA (100%) East Chicago, Indiana	2.8	United Mining Company City of Industry, California Subsidiary of Laiwu Steel Group Laiwu City, Shandong Province, China (30%)	
3. MINNTAC PLANT Owner: USX Corporation (100%) Pittsburgh, Pennsylvania	15.0	6. KEEWATIN TACONITE COMPANY Owner: USX Corporation (100%) Pittsburgh, Pennsylvania	5.5
4. HIBBING TACONITE COMPANY Cliffs Mining Company, Managing Agent Owners: Mittal Steel USA (62.3%) East Chicago, Indiana Cliffs Mining Company (23%) Cleveland, Ohio Steel Company of Canada, Ltd. (Stelco) (14.7%) Hamilton, Ontario	8.5		
		TOTAL EFFECTIVE CAPACITY:	40.8

* Effective capacity is the annual production capacity in natural long tons (including flux) that can be sustained under normal operating conditions.

The ownership percentages shown are the ultimate percentages controlled by parent steel and mining companies. In some instances, various other partnerships and subsidiaries are listed on legal corporate documents.
